Automated user management and device provisioning for Microsoft Managed Modern Desktop.

Automate365

Automate365 is a SaaS solution for fully automating delivery of the Microsoft Modern workplace. Automate365 interfaces with various HR systems, with ITSM systems, with distributors and with your Microsoft environment. Thus, based on HR mutations, the creation and removal of IT users, ordering and installing systems and setting up the environment fully in house style can take place fully automatically.

Required activations

To fully activate Automate365, the following two activations are required:
Business application registration(Global management rights required).
These rights are required for almost all things within the Microsoft 365 platform.
Microsoft Partner (Global administration rights required)
These rights are only required when using the Assets and/or Licenses module. This gives Innovative rights to scale new hardware and or licenses directly within the solution.

Link your environment

Before linking your environment, an invitation to link will be sent via email and we will contact you for further installation instructions.
