

Microsoft Power Platform – Offering

April 2025

Power Platform Environment Evaluation & Governance Framework

Our Offering

Overview

Assessment & Governance Framework for Environments

3 Steps, 2 Weeks, 1 Outcome | Innovior assists organizations in assessing their current state, identifying improvements, and adopting best practices in Power Platform governance.

The Power Platform suite enables organizations to develop business applications and automate processes without requiring extensive coding skills. Its core capability, low-code/no-code development, allows users to build apps and automate processes from start to finish, modernizing the organization and enhancing efficiency.

Step 1 – Collect information about the Power Platform tenant, environments, usage patterns, license models, and citizen developers using a customized questionnaire.

Step 2 – Review the results collaboratively to understand priorities and outline high-level plans.

Step 3 – Innovior will document any shortcomings and propose mitigation steps based on best practices and standards, enabling the organization to establish a platform strategy and governance model.
