

Factsheet

Azure Readiness Assessment

**What can Azure mean for your IT environment?
What are the costs of a migration to azure?
Can all my servers, databases and applications
run on Azure?**

Through the Azure Readiness Assessment, we help you to complete your 'Azure migration business case'. Together, we make sure you lift off to a flying start. For a fixed price, you will quickly receive a fully developed plan with cost indication. This can be done within five working days.

1. INTERACTIVE WORKSHOP

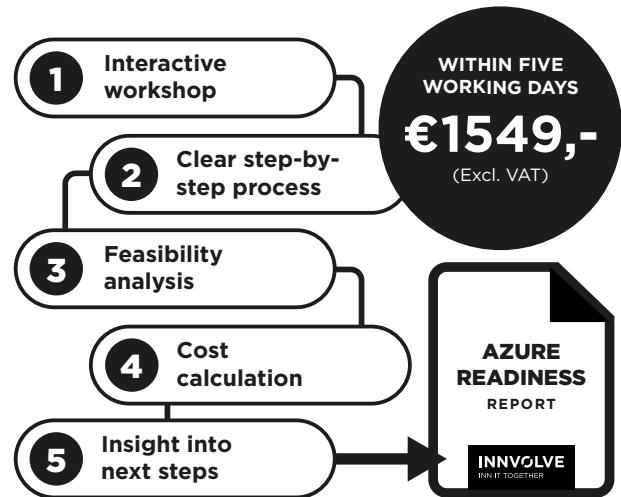

Through an interactive workshop, our Azure specialists get to work in cooperation with you on the migration to Azure. We answer questions, transfer knowledge and introduce you to the world of Azure. By choosing this interactive approach, the participants in the workshop automatically develop a basic understanding of Microsoft Azure.

2. CLEAR STEP-BY-STEP PROCESS

During the workshops, we look at the existing environment (IST) and together determine the possible target environment (SOLL). Based on this input, we then determine the process in a clear step-by-step plan. This can be a big-bang migration or a phased migration where workloads are gradually transferred from on-premises to Azure.

3. FEASIBILITY ANALYSIS

Experience shows that it is wise to determine as early as possible in the migration process whether there are components in your existing IT landscape which cannot be easily migrated to Azure. During the deepdive workshop, these possible gaps are addressed and scenarios for a solution will be discussed. We want to be ahead of possible disinvestments in order not to be surprised with workloads that cannot land or run on Azure.

4. COST CALCULATION

Calculation of Azure operating costs

Microsoft Azure features a pay-per-use model. In order to make a good comparison between the costs of the existing on-premises environment and the monthly costs for Azure, a calculation is made in which the expected costs for the complete workload on Azure become transparent.

Calculation migration project

Besides monthly Azure running costs you need to take into account one-time costs for the migration project. By carefully mapping out the phasing and essential parts of the project in combination with Innvolve's experience with previous projects, an indicative cost calculation can be made. This calculation, together with the Azure running costs calculation, provides insight into the total expected investment and ROI for the migration to Azure.

5. INSIGHT INTO NEXT STEPS

The workshops and elaboration into a thorough plan provide a good insight into the expected next steps that are necessary to achieve a fully migrated Cloud Native Azure environment. Think about the planning phase, determining the required competences, building the Azure Landing Zone and the actual migration to Azure. Together we will make IT happen.
