Communication and collaboration securely.**

Communication:

- Audio and video calls
- Online meeting rooms
- Chat Interactions

Colaboração:

- Work teams
- File storage
- Task management

Being agile doesn't mean working harder, but accomplishing more with less effort!

What is Inove Agile 365 for Teams?

It is a Microsoft Teams implementation and adoption service, developed by innovate to help companies transform the way they communicate and collaborate with their teams, departments, and customers. Based on the Agile methodology we go through the steps below for the success of your project:

- 1 – Envisioning Workshop:** workshop for IT staff and key users where we will present the full potential of the tool + integrations with other Office 365 features and adaptation of the workspace with other services, for example Trello, GitHub, Adobe and many others.
- 2 - Solution Assessment:** Immersion in the way departments and teams work, considering the business objectives combined with the most appropriate technologies: SharePoint, Stream, Planner, Power Automate.
- 3 – Pre-Game & Deployment:** We prioritize and plan subsequent sprints, considering deliveries that have already transformed the customer's business since the first week.
- 4 - Adoption:** Training of the IT team (administration, security and compliance) and training of users.

Transform your business in a few weeks, increase your productivity and work safely!
