

Agile 365 for Teams

Work in a shared way, engage people, have a unique space for meetings, files and conversations. Adoption safely and accompanied by experts.

Challenges

- Integration between teams: make employees communicate more and work in a unified way;
- Various communication tools: use in the corporate environment of unmanageable tools such as Whats app, Skype, Hangouts.
- Information security: files that transuon in an unsafe and unmanaged location.
- Adoption: Users who don't know all the technologies available on their O365 and continue to work the old way.
-

Ideal Solution

- With the use of Microsoft Teams, provide a secure communication and collaboration environment;
- Implementation accompanied by certified consultants, who immerse themselves in departments and teams, mapping the current work model and combining other technologies to bring more innovation and security;
- Immediate results, since the first deliveries;
- Training of the IT team and users, involving everyone for the success of the Project.
-

Desired Results

- More productive teams, performing more with less effort;
- Secure communication: audio and video calls, online meetings, chat interactions that can be recorded and archived for consultations or audits;
- Acertive collaboration: with efficient work teams that see your process being attended safely and quickly.
- Document storage: security for your data, information to everyone's avanc;
- Involvement: people committed and involved with the solution.
-

Inove Agile 365 for Teams

Inove Agile 365 for Teams is designed to bring agility and efficiency in the deployment and adoption of Microsoft Teams, based on agile methodology are 4 steps that will help transform the way of collaboration and communication between teams and departments:

1 - Envisioning Workshop

Workshop para a equipe de TI e os principais usuários onde, apresentaremos todo o potencial da ferramenta + integrações com outros recursos do Office 365 e adaptação do espaço de trabalho com outros serviços, como Trello, GitHub, Adobe e muitos outros, é importante que todos conheçam todo o potencial da ferramenta e abracem o projeto!

2 – Solution Assessment

Immersion in the way departments and teams work, considering the business objectives combined with the most appropriate technologies: SharePoint, Stream, Planner, Power Automate. It is important to modernize the way of working, maintaining the DNA and processes of each team!

3 – Pre-Game & Deployment

. For implementation of standard and customized software components. In this hybrid model, we will use artifacts to control costs, time and scope, combined with the entire agile tooling. The benefits range from improving quality and phasing deliveries, flexibility and closer proximity to customer expectations

4 – Adoption

Two-step training:
1 - IT team, administration, security and compliance;
2 - Users by department, material availability, online training and initial support.

Get a unique, centralized view of your co-ordinate and use the information clearly and objectively to help you produce more and better.
