

Connected Safety Reference Architecture

Safety Assets

Our solution connects to your existing or new safety assets to detect and respond to incidents with visual cues, alerts and more.

User Experience

A mobile application connects your incident response team to your user community to help them get and remain safe when needed.

Cloud Services

Microsoft's Azure Cloud provides the scalable, reliable and secure platform for your customer's data and for the solution services.

Cloud Intelligence

Custom cloud logic helps to manage the user experience, incident alert and response, and safety asset management.

Mgmt Experience

Your team uses our web-based application to assist in incident alerting and response and to help your users through an incident.
