

Solution Brief

Microsoft Information Protection Fast Start

Business challenge

As more and more business data moves to the cloud, classifying and protecting that data is becoming ever more critical. Safeguarding sensitive data across documents, apps, and email is critical to your organization. However, it can be hard to know where to start. Insight Canada has deep expertise in Microsoft 365® and Microsoft Purview® and has developed a set of best-practice baseline policies and configurations to kick-start your Information Protection journey.

How we help

Harness the power of Microsoft® Information Protection to develop a labelling strategy, implement a framework, pilot your labels, leverage a change management strategy to prepare your user community, and then deploy your configuration into a production environment — all for a fixed fee. Our experienced consultants will allow you to deploy an effective and efficient Information Protection framework without having to reinvent the wheel.

Envision and planning

During a series of workshops, we will review the following:

- Art of the Possible, including
 - Data classifications standards
 - Sensitivity labels and DLP policies
 - Alerting and auditing
 - Role-based access controls and permissions
- Insight-recommended baseline configurations
- Change management approaches and best practices
- Business stakeholder discussions

Cost

\$25,000

Duration

12 weeks

Benefits

- + **Develop and implement** a best-practice Microsoft Information Protection framework.
- + **Implement data classification**, labels, policies, and alerting tailored to your business requirements.
- + **Follow a structured change management framework** to ensure widespread and effective adoption.
- + **Leverage Insight's experience** to save you time and effort, and ensure your implementation goes right the first time.

Pilot and production implementation

The envision and planning phase will enable you to make confident decisions on the required labels, policies, and controls required for your organization. **After these decisions, Insight will implement the following:**

- Information Protection framework:
 - Up to 10 sensitivity labels
 - Up to 5 DLP policies
 - Alerting and auditing
 - Role-based access controls and permissions
- Training for your security analyst resources
- Change management plan, including:
 - Communications, user training, user engagement, and recommended supporting documentation
- Prepare your user community to classify data and understand the importance of Information Protection
- Execute a pilot of Information Protection with key stakeholders to ensure alignment with business processes and expected outcomes
- Execute a production rollout of Information Protection across your organization
- Operationalize support and handover

Getting started with Microsoft Information Protection can be an overwhelming undertaking. By leveraging Insight Canada's experience and best-practice framework, you can work through the process in a systematic fashion and improve your organization's posture without getting bogged down by analysis paralysis.
