

Summary

Microsoft Azure is a scalable and secure cloud platform that can play a key role in your transformation journey. Insight can help you quickly make progress, with better visibility, in ways that make the most impact on your business starting with the Azure Landing Zone Engagement.

The Azure Landing Zone Engagement brings you the basic building blocks of any cloud adoption environment, whereby the environment is provisioned and prepared to host workloads. A fully functional and production-ready Landing Zone is a key component of the Cloud Adoption Framework Ready methodology, and a best practice for businesses ready to migrate to the Cloud.

The Azure Landing Zone Engagement focuses on the following areas:

- Azure Subscription and Consumption
- Azure Naming Standards
- Azure Network Architecture
- Azure Identity, Authentication and Authorization
- Azure Compute and Storage
- Azure Operational Excellence and Management
- Governance and Cloud Security

What's Included

Planning and Design	Deployment	Operational Enablement and Transition
<p>The engagement begins with a series of interactive design workshops focused on governance and best practice architecture that is customized for your environment. The outputs from these workshops take the form of a comprehensive and detailed Azure Landing Zone design document</p>	<p>The deployment phase puts a focus on the overall deployment of the prescribed Landing Zone, including the creation of Infrastructure-as-code artifacts and automated deployment in alignment with DevOps processes</p>	<p>Our Azure Experts will work with your team to ensure they are fully enabled to operate and govern the Azure environment through training workshops, hackathons, and/or Managed Services support</p>

Benefits

The Azure Landing Zone engagement will leave your organization with a production-ready, well governed and secure Azure environment capable of supporting migrated and net-new deployments to the Azure cloud. Following the successful deployment of the Azure Landing Zone, you will be fully ready to continue the adoption journey through migration of existing workloads, and creation of new ones using the powerful toolsets and capabilities that Azure has to offer.
