

Azure Virtual Desktop FastStart

Summary

The Azure Virtual Desktop FastStart is a Virtual Desktop Enablement Engagement that will enable your users to leverage a corporate desktop environment, and access their documents and applications, from both on-premises and remote locations without VPN or client access (i.e. via a browser).

What's Included

- Virtual Desktop provisioning and rollout,
- Network and Application access considerations,
- A one-page user-facing quick-start guide,
- Provisioning access and testing three (3) well-understood Applications to ten (10) Pilot users,
- Recommended roll-out and communications strategies

Benefits

- Users able to access a corporate desktop environment, with access to applications
- Access to the corporate network, file shares, and other resources without client VPN required
- Three (3) well-understood applications are tested and validated for proper functionality
 - Other applications may also function, however, are not specifically included for testing
- Simplified rollout (i.e. via web, or simple client access application)
- A user-facing 1-page Quick-start guide

Price

Our highly experienced team can deploy this solution for as low as \$12,000 and in as little as 1 week, including the following features:

- 10 pilot users
- 3 applications
- Additional users @ \$25 each, and additional apps available with discussion

Option for broad rollout, IT-facing phone support, and additional applications may be discussed
