# About us

---

ISx4 deliver Insight through Analytics Strategy, Solutions, Services & Support.

We bring vast industry experience to help derive competitive advantage by moving our clients from **Hindsight**, through **Insight** to **Foresight**.

We create, deliver and manage analytics solutions in all areas of the organisation to include Finance, Risk (including fraud, waste & abuse), Customer Marketing, HR, IT, Audit, Logistics, AML, ALM, Clinical Trials, Life Sciences and Platform Support.

Our service is increasingly relevant and in demand as analytics services become a core competency in every area of the business.

Customers & staff located throughout Europe. (US, UK, IRL, PRTGL, NL, IT, ESP, Ger, IND)

ISx4 have formal certified partners with SAS, RStudio, Anaconda, Microsoft, IBM and AWS. These strategic partnerships allow us to remain vendor neutral and focused on our core competency area of analytics service delivery.

# The ISx4 service offering

---

At ISx4 we drive Insight, Strategy, Solutions, Services & Support through Data Analytics. Our team of specialists are experts in all aspects of Analytics and can help with Strategy Creation, Solution Implementation, Service Delivery and In-Life Support of all Analytics solutions and environments.

Our Service Offerings are broken into 4 simple areas (Sx4);

- 1) **Strategy:** working to create a plan of action to achieve long term analytics benefits
- 2) **Solutions:** delivering analytics techniques, tools and technologies to derive customer insight
- 3) **Service:** the provision of experienced SME and technical delivery implementation resources
- 4) **Support:** the In-Life and BAU management of analytics solutions and environments

## Our approach;

- 1) A technology and vendor agnostic approach to analytics.
- 2) Listen, Understand, Scope, Install, Implement & Deliver (LUSIID)
  - i. Self service analytics enablement within your organisation.
  - ii. End to end managed service of analytics environment including interface touch point integration.
  - iii. Bespoke point in time solution delivery.
  - iv. Analytics resource augmentation.

## Benefits to using ISx4

---

ISx4 offer a tailored end to end client service to focus on key customer priorities including operational delivery excellence & support. ISx4 bring critical industry knowledge expertise & service delivery elements.

The ISx4 Team has 4 core practice offerings;

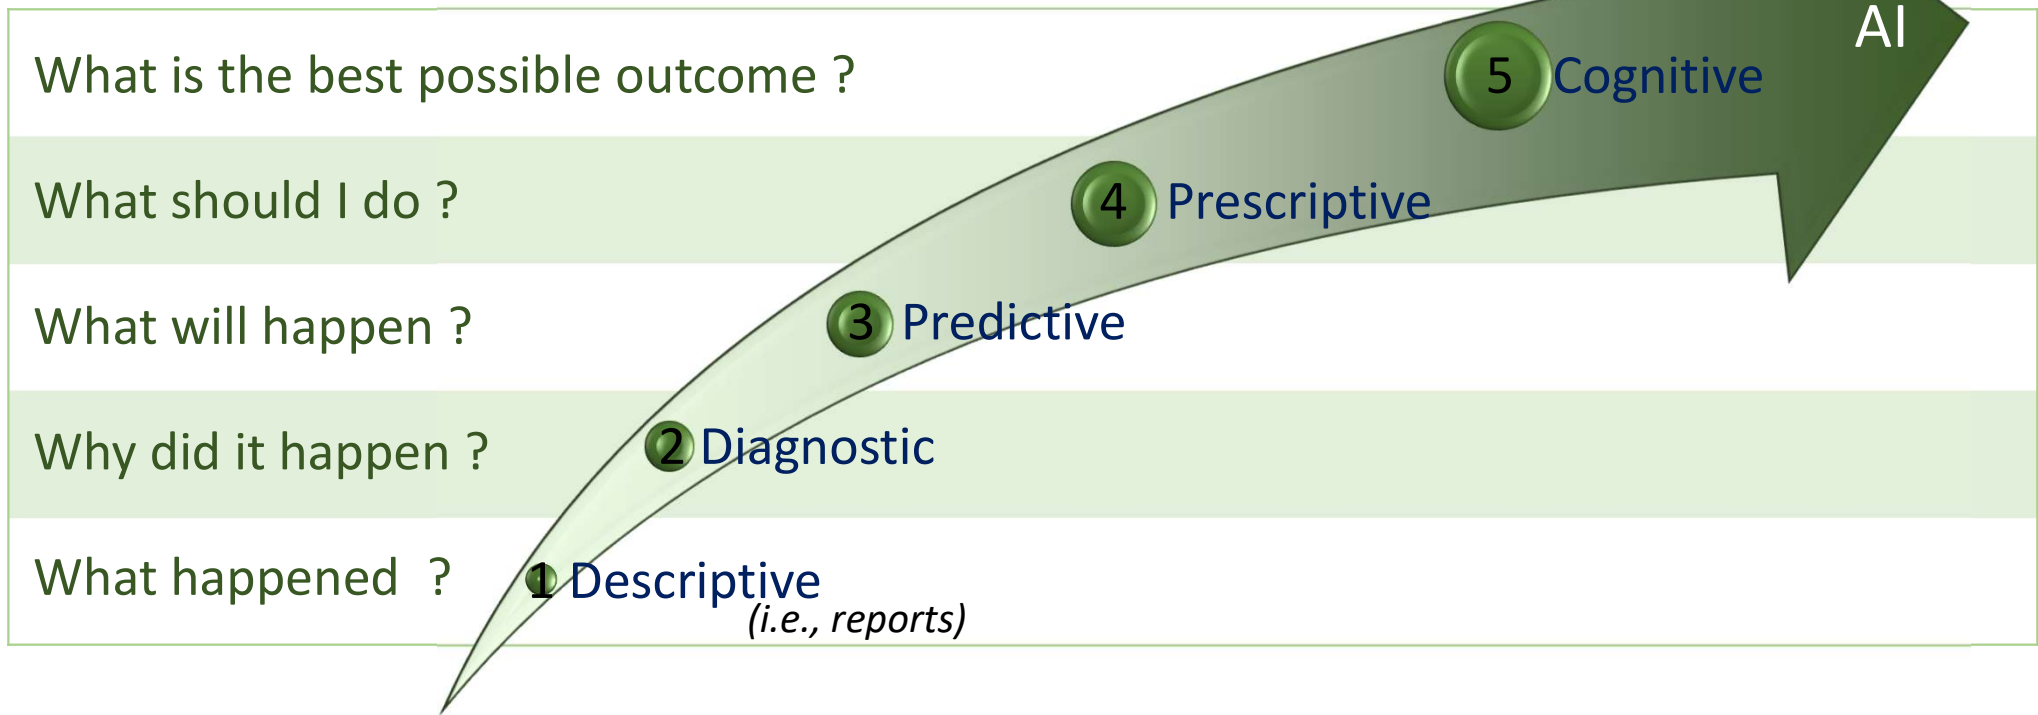

- 1) **Data Management** – ETL, Data Provisioning, BI, Visualisation
- 2) **Data Science & Solutions** – Data Modelling, Risk and Vendor Specific solution consultants
- 3) **Platform Management** - Installation, In-life Management & Support Services
- 4) **Cloud Services** – Architecture, Deployment and In Life Management

Our Team work with industry leading vendors and customers who are currently planning or have already made the strategic leap to new service delivery paradigms. Not only do ISx4 have the strategic understanding but we back it up with real life experience with the ISx4 team actually delivering these transitional changes – again noting the importance of taking the existing staff with us on that journey.

Current Technology focus areas include:

Cloud Adoption, Dockers & Kubernetes, self service, AI, RPA, Dev Ops, Agile & SDLC, AWS, IAM, Open Source adoption, underpinned by real life experience and industry approved foundational services.

**Just add data**

# Data Analytics Strategy

---

An Analytics Strategy document is focussed on enabling and empowering the adoption of data and analytics initiatives which add value across the organisation. It does not make explicit technology recommendations as these should be underpinned by IT & Data strategies and driven by business requirements.

There are four pillars of the Analytics Strategy:

- Alignment
- Roadmap
- People
- Platform

An Analytics Strategy should outline the following:

- A framework for assessing analytics maturity
- An approach to delivering analytics projects
- An overview of the core capabilities of an analytics platform

# Analytics Visualisation

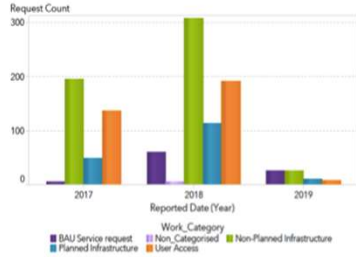

Below are some sample dashboards and reports

## SAS 9.4 Grid - Report Detail

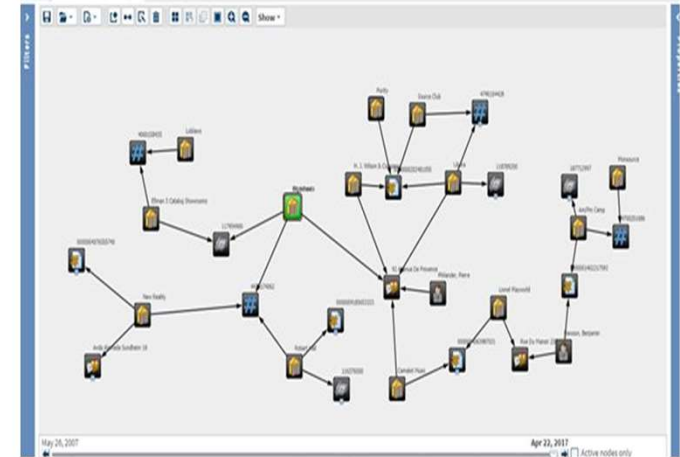

- In addition to the technical changes a number of management processes have also been deployed.
- Change and Incident Management has been automated in Remedy and Reporting is carried out on the metrics that are produced therein.

Work Category by Reported Date Hierarchy

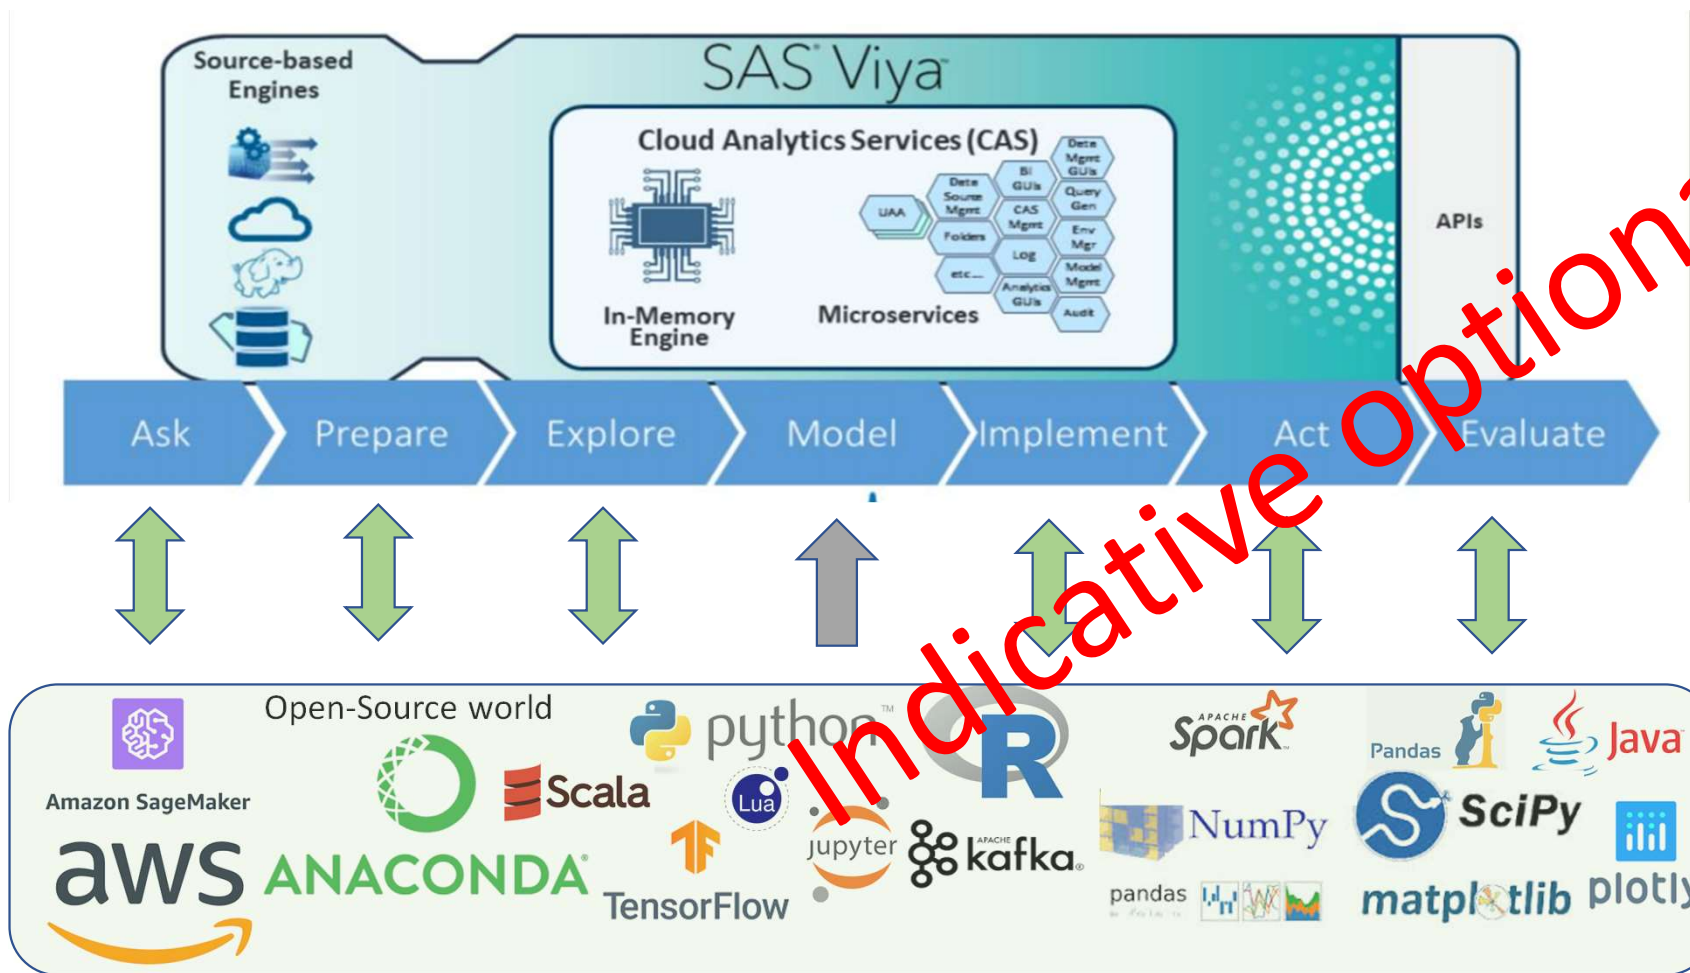

- Service requests have increased substantially showing the transition from Stabilization to Enhancement to BAU
- Planned Infrastructure increases indicate the number of technical updates, summarized in the previous slides, that have been undertaken.
- As a percentage of the total, User access requests are decreasing.

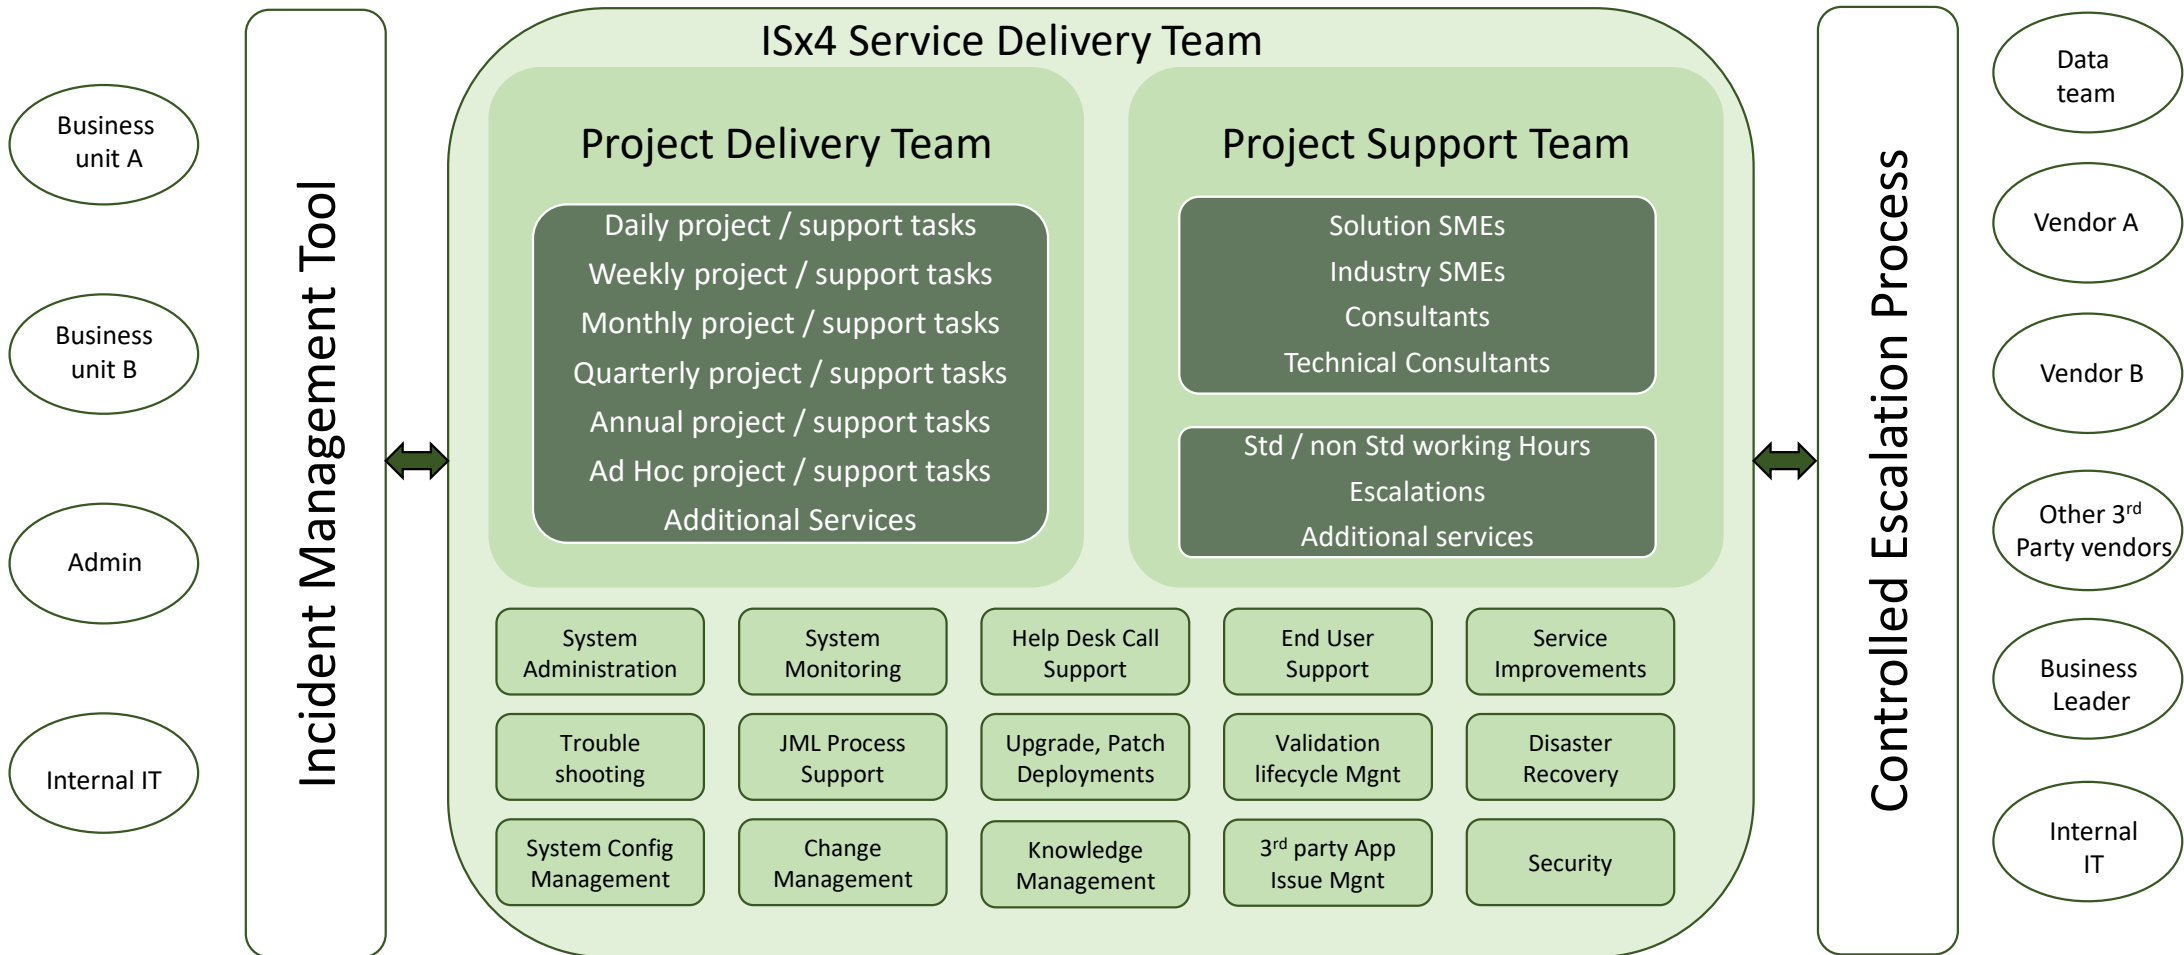

## ISx4 Incident Report

Date of Incident	Remedy Number	Severity	AAS Trackin	Executive Summary	Mitigation/Reference	Actions	Incident Closed	Known
11/02/2020	INC000001675659 INC000001676839 PBI000000062063	Medium		IDST and RAROC became unavailable due to SAS returning results in a delayed fashion (result computation and return was taking over 5 seconds in most cases). This caused a timeout on the Service Bus which resulted in users not being able to calculate grades on SONIC and IDST	Initial outage assumed to be issues with virtual machine stability and/or HNAS issues following DCFO activity.  1) The Virtual Machines which house the WSProd environment (IDST and RAROC run on this) were failed over and back as well as a HNAS fallback to Alpha from Omega. This may have introduced latency delays due to the fact the VMs were not on the same machine (this was amended later on).	Restart of production web services VMs at 8pm 14/02 appears to have cleared the issue  Further planned actions recommended to mitigate excessive workload on the Grid:  • Introduce time based windows to restrict	Yes	PBI000000062063 as the root cause of the issue is progressing

# ISx4 Typical Operations & Support Model

# Analytics Post Covid19. .... So what ?

---

As we continue to see a lot of turmoil in the world and lack of economic stability - The 2 Key questions which must now be considered for every analytics project are;

- What data matters ?
- What data makes sense ?

To ensure accuracy of outcomes (in our new world) we must incorporate “new” people behaviour experiences into our models and decisions. This ensures near-term improvement, and a more resilient process going forward. Listed below are the five key considerations for effective analytics post C19:

- Welcome new data
- Incorporate expert judgement
- Analyse the hypothetical (because in some scenarios previous assumptions no longer hold)
- Build for fast flexibility
- Monitor for early warnings

Failure to apply these considerations in your analytics techniques will simply result in a reduced accuracy of your outputs

# ISx4 Retail Bank Case Study

ISx4 worked with a medium sized bank on its extensive & complex analytics platform to provide analytics leadership, direction and support through a three pronged process of stabilize, embed & enhance. Widely understood to be an exemplar service within the bank and has set the bar for other service delivery vendors to aspire to.

## Problem Statement:

- ✓ Lack of analytics direction
- ✓ Lack of understanding in relation to what to do to help move up the food chain
- ✓ Unsupported enterprise analytics platform
- ✓ Performance Issues with their analytics environment
- ✓ Unstructured analytics processes leading to potential audit & regulatory issues
- ✓ Allied with an Increase in analytics demand due to regulatory requirements of IFRS9 and IRB
- ✓ Lack of appropriate analytics resources
- ✓ Provision of Subject Matter Expertise - The client needed direction in relation to some business focused problem areas. E.g., Risk & Customer Analytics, Fraud, Audit etc

## What we did:

- ✓ A bespoke analytics readiness review study
- ✓ An analytics strategy document
- ✓ We then moved to implement that strategy on 3 fronts:
  - ✓ Analytics leadership, guidance & direction
  - ✓ Analytics platform support
  - ✓ Analytics application dev & support
- ✓ We developed an enterprise analytics support agile framework based on three key elements:
  - ✓ Stabilise: a base level of Support and no system down times.
  - ✓ Embed: a support framework
  - ✓ Enhance: a defined deployment process to support the operating model

## Key Results:

- ✓ Industry leading, multiple **Award Winning** analytics service
- ✓ Significant growth in internal user population, end users and resultant return on investment figures
- ✓ State of the art analytics operating model
- ✓ Stable environment with a significant reduction in issues.
- ✓ Single go to point of contact regarding all aspects of analytics
- ✓ Internal analytics business functions working hand in glove with senior analytics SMEs
- ✓ Full end to end integration capability for vendor specific and open source analytics solutions to work seamlessly

# ISx4 Product Development Case Study

ISx4 has delivered the end-to-end development of a critically important application for a leading bank, which has direct impact on their business revenue. The application, used by every customer applying for a mortgage, performs highly complex mortgage and risk-related decision making and ensures adherence to regulatory requirements.

## Problem Statement:

- ✓ Our client wanted a one-stop solution to assess each customer's affordability, provide a "Go / No Go" decision, and an associated recommended mortgage product personalised to the customer's individual needs.
- ✓ The objective was to remove the need for repeatedly performing complex calculations in a multi spreadsheet environment, and the time-consuming activity of referencing an unstructured set of documents for regulatory requirements aligned with local risk and tax compliance rules.
- ✓ The application was required to encode the rules and regulations in a configurable and flexible solution, and in conjunction with the customer's individual financial status, assess the customer's eligibility, and offer the most appropriate mortgage product.

## What we did:

Development of a complex analytical application enabling critical mortgage decision making

- ✓ Work with business and technical stakeholders to undertake extensive analysis of all business rules and regulatory compliance requirements
- ✓ Provided expert guidance on the application architecture and integration, including how to interact with the front-end to display the customer information to the end users
- ✓ Provided technical experts to design, develop, and implement the application considering all different rules and requirements along with complex mortgage calculations for various available mortgage products.
- ✓ Designed, developed, tested and deployed the solution to integrate the back-end application with the user-driven front-end application

## Key Results:

- ✓ Successfully developed and implemented the fully automated end to end application
- ✓ The client can now provide a personalised mortgage decision within seconds
- ✓ It is considered to be the most critical application by business stakeholders; now used for every mortgage evaluation
- ✓ Significant cost saving by eliminating unnecessary time and effort of intermediary manual intervention.
- ✓ Highly efficient and easy to use application results focused application
- ✓ ISx4 provides ongoing support and maintenance of the application e.g., amending dynamic data such as budgetary and tax rules as per new year's regulatory requirements

# ISx4 Irish Elite International Sports Team Case Study

ISx4 have been working with international high performance sports management teams and elite athletes, to deliver game changing insights and take athletes to the next level of performance using analytics insight. Sport Ireland prepare Irish sporting teams to compete in the Olympic, Paralympic and European Championships.

## Problem Statement:

- ✓ The project was driven by a desire to enhance the performance of elite athletes, and provide a competitive edge through the use of analytics to bring value and insights - the small percentages!
- ✓ Our client felt that they were spending too much time focusing on the building of analytical reporting from the raw data generated from boxing tournaments.
- ✓ Gaps in their technical knowledge meant that a robust internally developed solution would have proved too difficult and time consuming to undertake.
- ✓ A lack of understanding of the available options to land at the best solution drove the need to engage with a professional services consultancy.
- ✓ The client's desire to include a level of self sufficiency was key to the success of the process design and final solution.

## What we did:

- ✓ Designed a data model that would drive the current analysis reporting and facilitate the development of further analytics.
- ✓ Built a tool that efficiently transforms the raw data into the reporting data model.
- ✓ Delivered a dashboard for the boxing coaches to have access to clear and informative data visuals relative to each athlete.

- ✓ Import all bout data into a punch plot dashboard using the developed solution.
- ✓ Led the client through the process ensuring critical KPI targets were met throughout.

## Key Results:

- ✓ Successful implementation of a fully functional, interactive and standalone solution to produce analysis dashboards from the captured raw data.
- ✓ Empowered the end client to own and flex the solution to deliver against their own internal bout specific priorities.
- ✓ Aid the boxing coaches to identify trends based on punches thrown and conceded dependent on their success, to provide analysis that can be used to improve the athletes' performances.
- ✓ .....Gold Medals !

# ISx4 Finance & Risk Modernisation Case Study

ISx4 worked in a large European Financial Services Institution on an end to end finance and risk modernisation programme. Finance and Risk Architecture Alignment Initiative (FRAAI). The objective was to build a more effective and efficient finance, risk and regulatory reporting environment in parallel with the existing legacy environment, then, migrate and move to live.

## Problem Statement:

- ✓ Architect the restructuring, re-platforming and transformation of the entire finance and risk estate and operating model, to deliver an efficient regulatory compliant environment.
- ✓ Creation and provision of finance and risk data management & techniques to include end to end lineage & governance.
- ✓ Enterprise model risk management and process orchestration to promote transparency, traceability and automation.
- ✓ Development of analytics forecasting activities for scenario-based capital planning & regulatory requirements.
- ✓ Build out the complete End to End release management process to align with each of the 7 core business work streams onto each of the 7 environments in tandem with the programme plan, drivers and milestone objectives.

## What we did:

- Developed a CICD RAT (Continuous Improvement Continuous Development - Release Automation Tool) using Python with operational functionality.
- ✓ Analysed end to end flow – then designed and built an industry leading state of the art organic CICD RAT service.
- ✓ Created new CICD operating model.
- ✓ Build critical ETL flows and data marts to facilitate an efficient process flow.
- ✓ Manage/maintain deployed code content, so that logs & dead code don't accumulate.
- ✓ Trigger and run flows in process manager.
- ✓ Fully automated Test suite.
- ✓ Ensured full open source & vendor specific CICD Integration.

## Key Results:

- ✓ Our CICD process is now the spine which allows the complete end to end FRAAI programme to breathe and evolve.
- ✓ Significant programme cost savings through process efficiencies. (€100Ks).
- ✓ Stable environment, reduction in issues, increased time to production, vendor specific, fully automated & integrated, open source release management tool.
- ✓ Additional Usages include; Server Upgrades, Maintenance Releases, Backups & Disaster Recovery Planning.

# ISx4 Life Science

ISx4 have worked extensively to Design, Build, Modernize, Implement and Support a validated SCE environment in a Life Science organization. We implemented an innovative build and personalized support model which gave competitive advantage by maximizing system resources with minimum impact on critical clinical deliveries.

## Problem Statement:

- ✓ Lack of system stability & reliability
- ✓ Data sharing challenges creating inefficiencies during workflow resulting in long delays
- ✓ SCE system not current
- ✓ System resource allocations and workload segregation not optimized for a **Life Science Organization**.
- ✓ Shared support resource bottleneck resulting in delay and huge backlog of issues
- ✓ Business negatively impacted by inadequate processing, support capability, instability and significant overhead of integration of other tools with System platform

## What we did:

- ✓ Engage key business and IT stakeholders across the organization to understand the role of the business, current and anticipated business needs
- ✓ Build SCE capable of accommodating maintenance releases without significantly impacting the business
- ✓ Grid configuration designed to address:
  - ✓ Maximum utilisation of core based license between validated and non-validated resource allocation
  - ✓ Customised to support high and low usages during critical delivery period
  - ✓ Agile, efficient, high-available, and scalable system implementation
- ✓ Dedicated expert worked proactively to minimise response time with unbiased consultation for future business need

## Key Results:

- ✓ Successful implementation of Grid based SCE system with reduced license cost and increased utilization
- ✓ Business users empowered and educated with customised toolset to accurately plan and utilise Grid system to meet their business needs
- ✓ Quick response operating model by implementing system monitoring & alerting
- ✓ Stable environment with a significant reduction in issues
- ✓ System fully configured to clients current needs to include defined process for future upgrades & new product integration
- ✓ SOPs updated defined SPOC to resolve all integrated business tools with Systems
