SECURITY & COMPLIANCE

From information security policies to Managed Security

THE IMPACT OF DATA ON OUR LIVES IS ENORMOUS

EVERY DAY WE USE:

23 million times more data
... would be available
... and it's hard to know
... how to use it
... to create new value?

ORGANIZATIONS BET ON DATA-DRIVEN TRANSFORMATIONS

New insights

New policies/approaches through new insights

Increase turnover

Achieve more revenue from new or existing data

Digital transformation

Developing new business models based on data

Reducing costs

Reduce costs by using data from the past in a smarter way

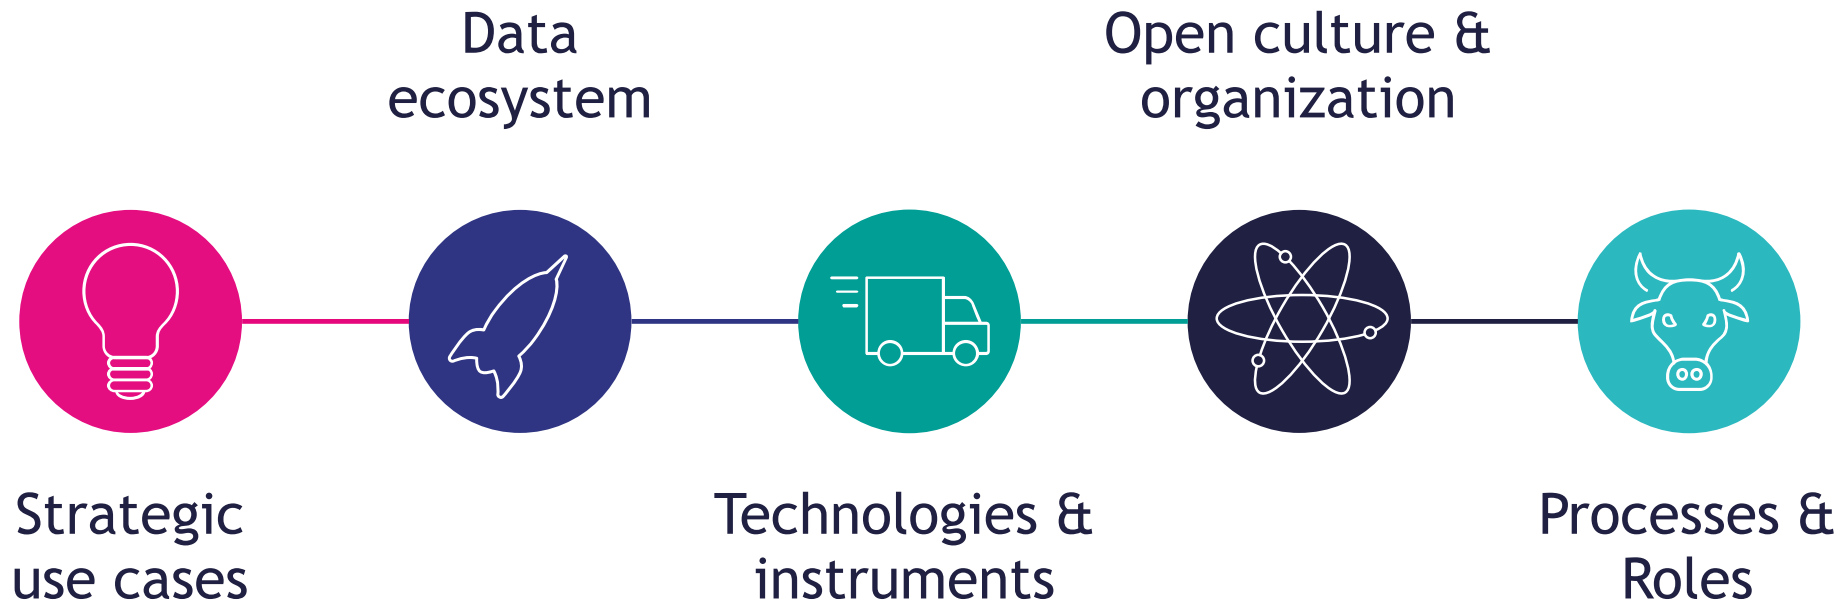

Data Monetization

Sell existing data to interested parties

DATA SUCCESS IS MORE THAN JUST TECHNOLOGY

DATA-DRIVEN SUCCESS PREREQUISITES

DATA IS THE OXYGEN FOR YOUR OPERATIONS

INSPARK HELPS ORGANIZATIONS END-TO-END:
FROM DATA-DRIVEN TRANSFORMATION TO MANAGEMENT
AND INNOVATION OF THE DATA PLATFORM.

MANAGED OXYGEN PUTS YOU
ON THE STARTING BLOCKS

MANAGED OXYGEN

- Oxygen is an Azure-based **Data & AI platform**, specially designed for maximum **scalability and security**. Oxygen is **'Ready for Business'** in weeks, without complex implementation and design sessions.
- Oxygen offers THE total solution for **onboarding, management and security**, and is linked to a **permanent commitment** aimed at innovation with and adoption of Data & AI within your organization.
- InSpark supports you **24x7 worldwide** via our **security & operations center** and ensures that your platform is up-to-date based on data and security technology and knowledge.

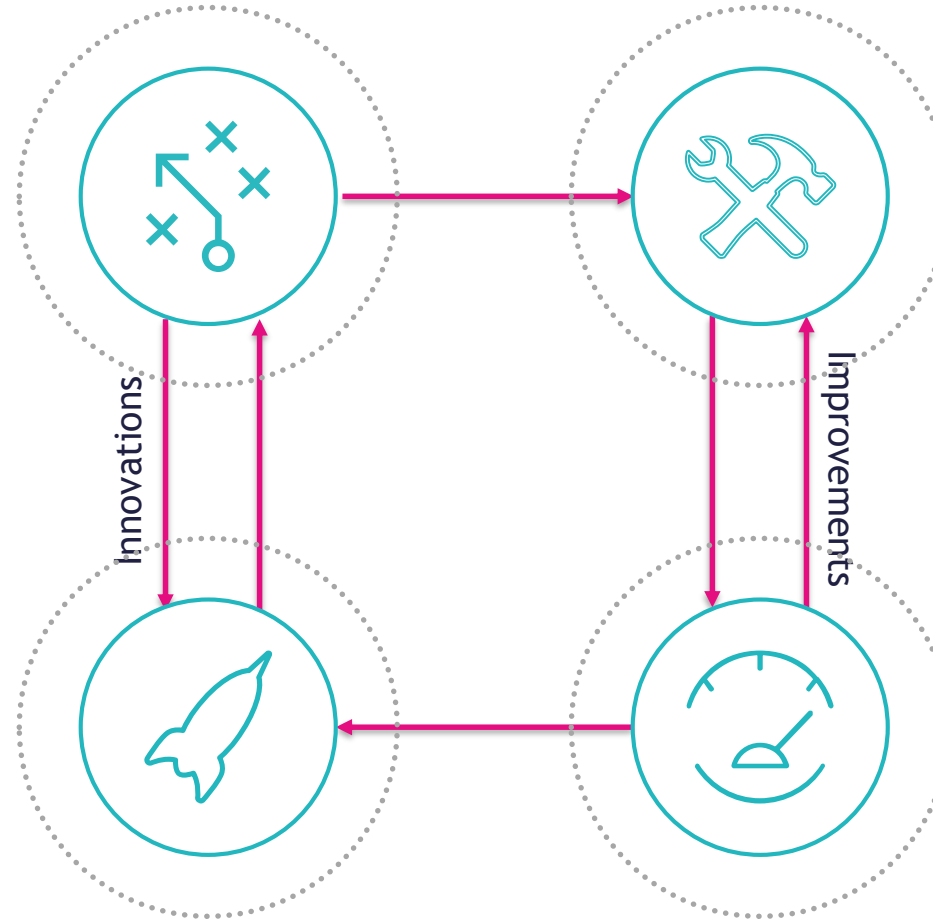

THE OXYGEN APPROACH

Data strategy:

Determining the contribution of data to business objectives and transformation, identifying and prioritizing data use cases and classifying feasibility, determining technical, security and compliance requirements and determining the (innovation) agenda as well as the organizational model.

Data driven innovation:

Informing the organization about data and driving data adoption throughout the organization. Experimenting with new data use cases and building end-to-end data applications together.

Oxygen onboarding:

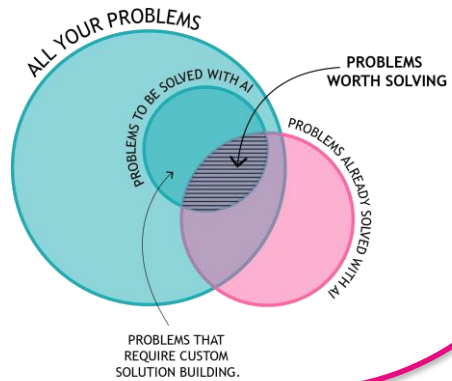

Implementation of Oxygen and the setting up of subscription management, identity & security, networking & connectivity, operational management and possibly migration of (existing) data scenarios and/or the connection of data sources.

Cloud operations & security:

Cloud monitoring, back-up & recovery, updates & patches, pipeline management, permanent identity protection, platform and Data & AI application, access and usage audits, incident management and optimization.

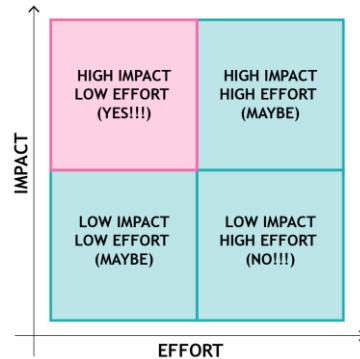

OUR OXYGEN SERVICE

DATA STRATEGY IN 4 STEPS

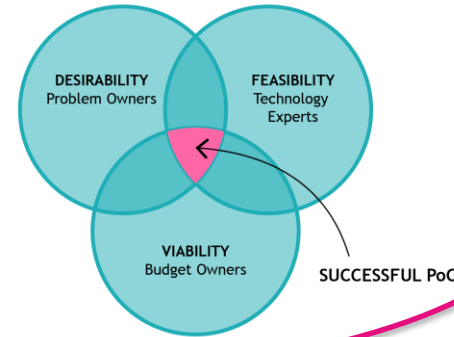

1. Identify problems worth solving

Understand which of your existing challenges can and should be solved with AI.

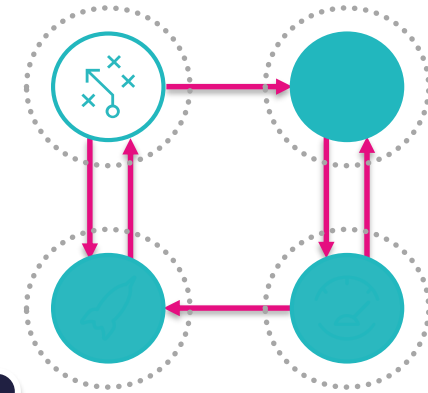

2. Find the right focus

Priorities by identifying high value / low effort use cases.

3. Define a successful PoC

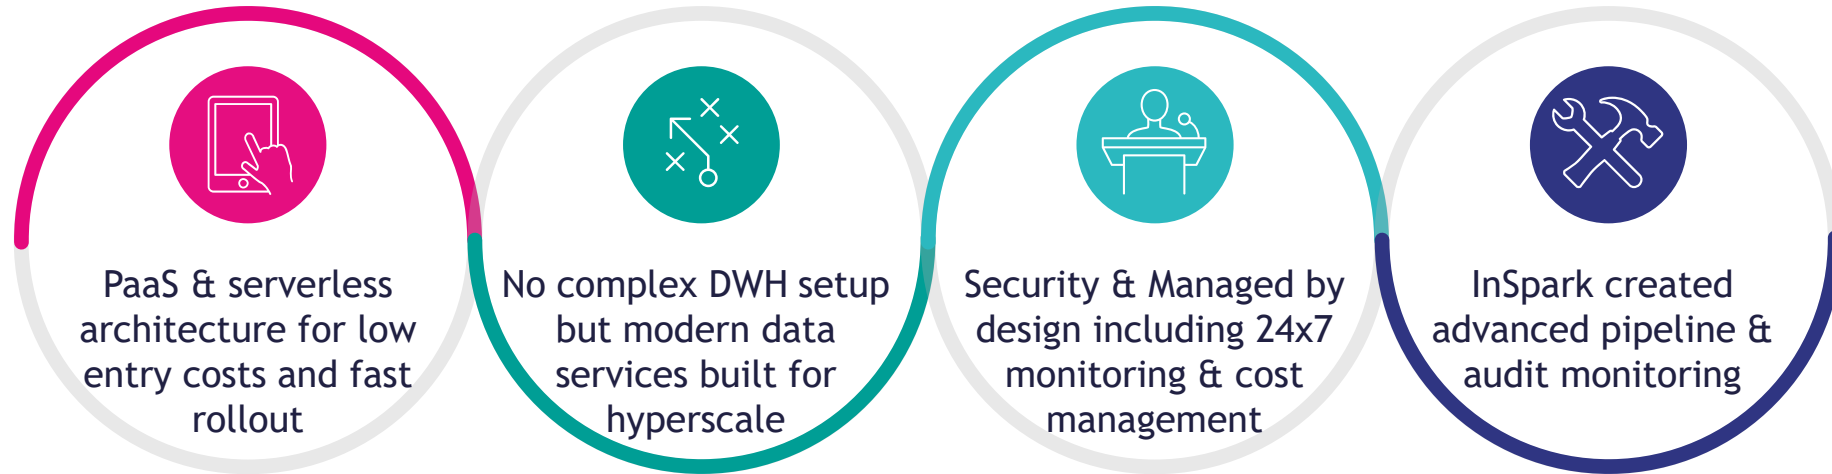

Involve all relevant stakeholders to integrate your AI solution into business operations.

4. Scale and run your AI solution in production

Make the right technology choices and build the right organizational capabilities to put your solution in production.

MANAGED OXYGEN BENEFITS

PaaS & serverless architecture for low entry costs and fast rollout

No complex DWH setup but modern data services built for hyperscale

Security & Managed by design including 24x7 monitoring & cost management

InSpark created advanced pipeline & audit monitoring

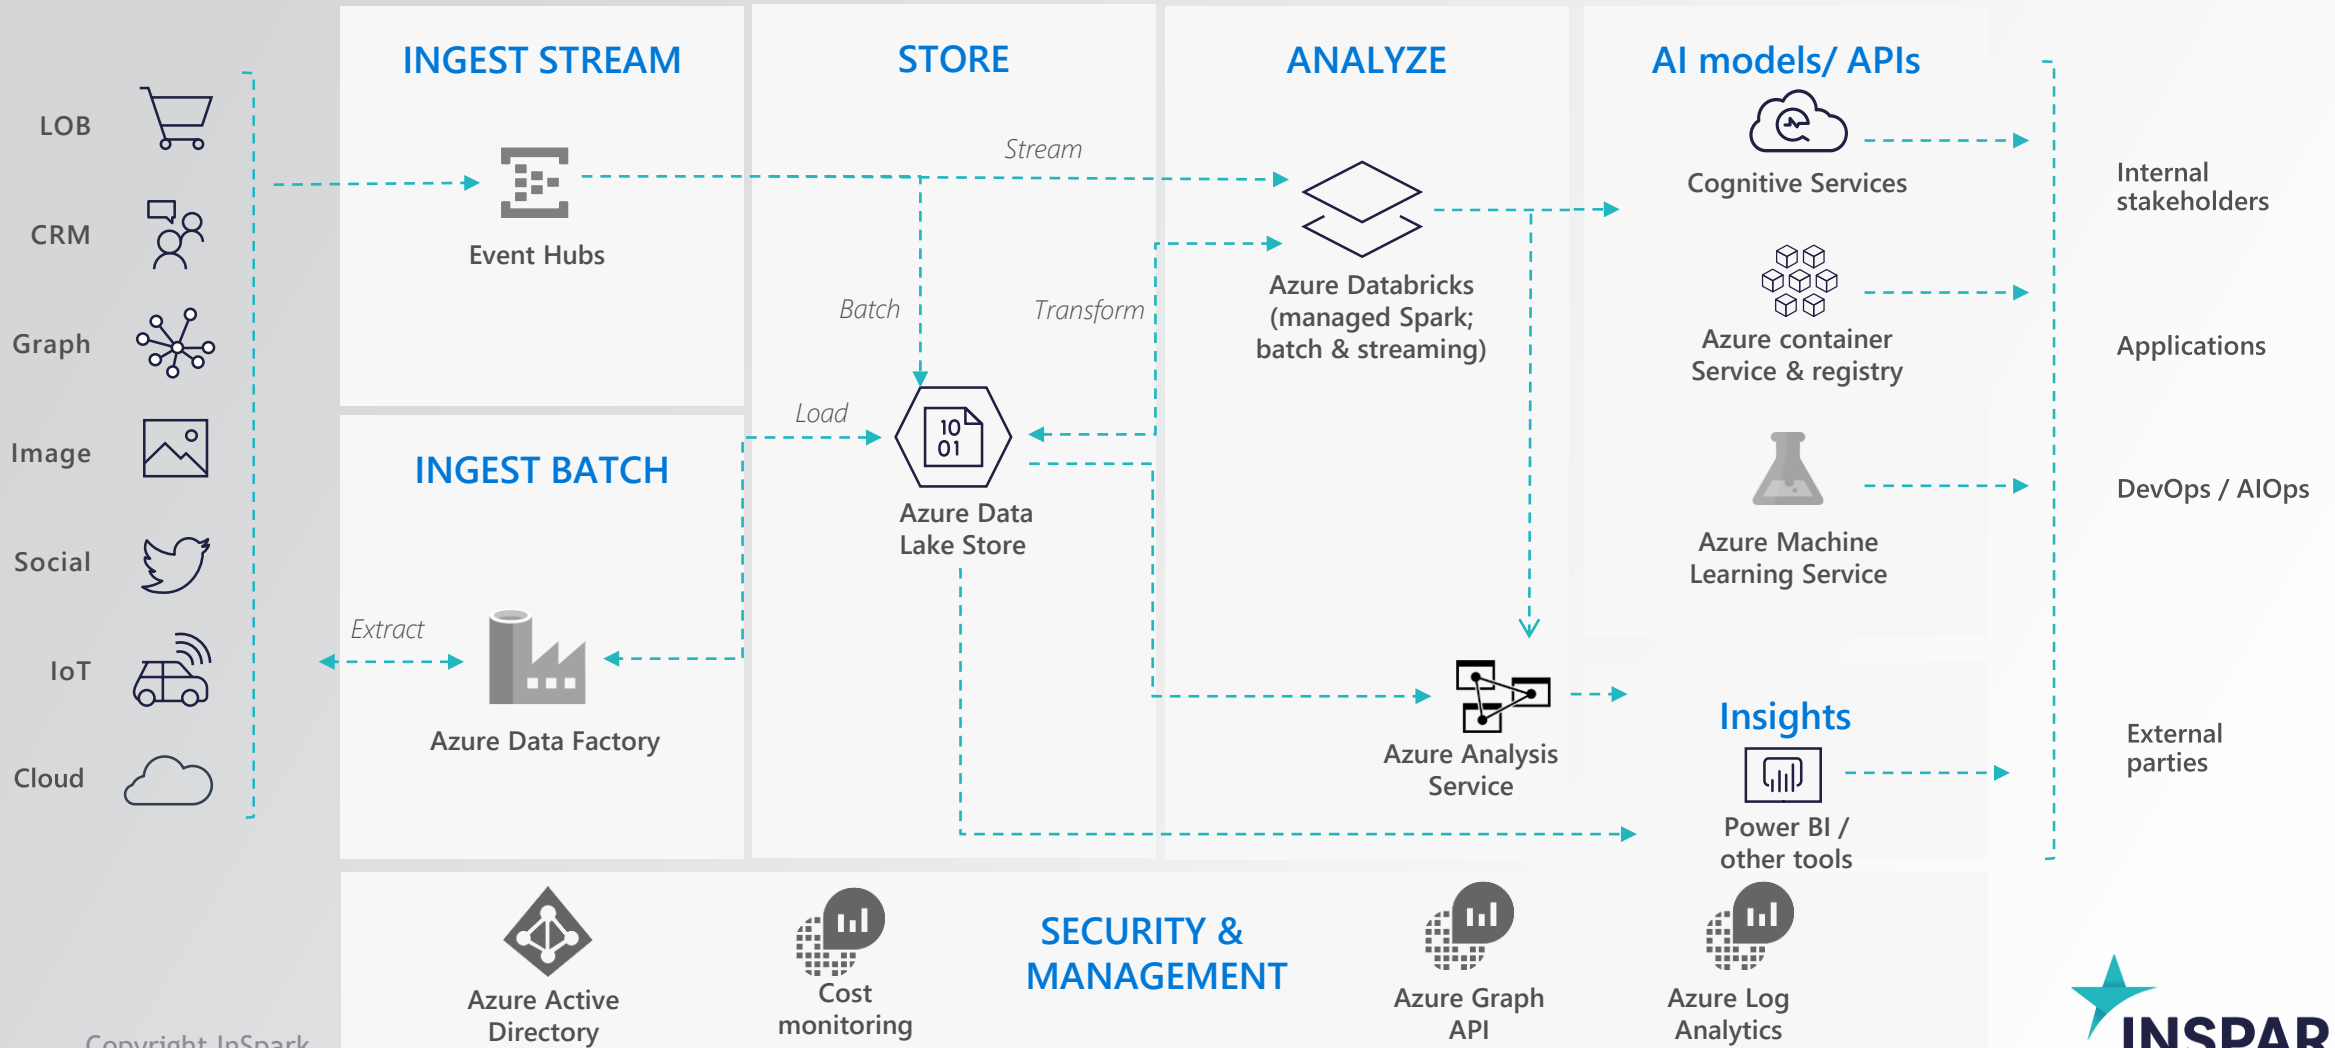

01 LOW COST & FAST ROLL-OUT

02 MODERN DATA ARCHITECTURE

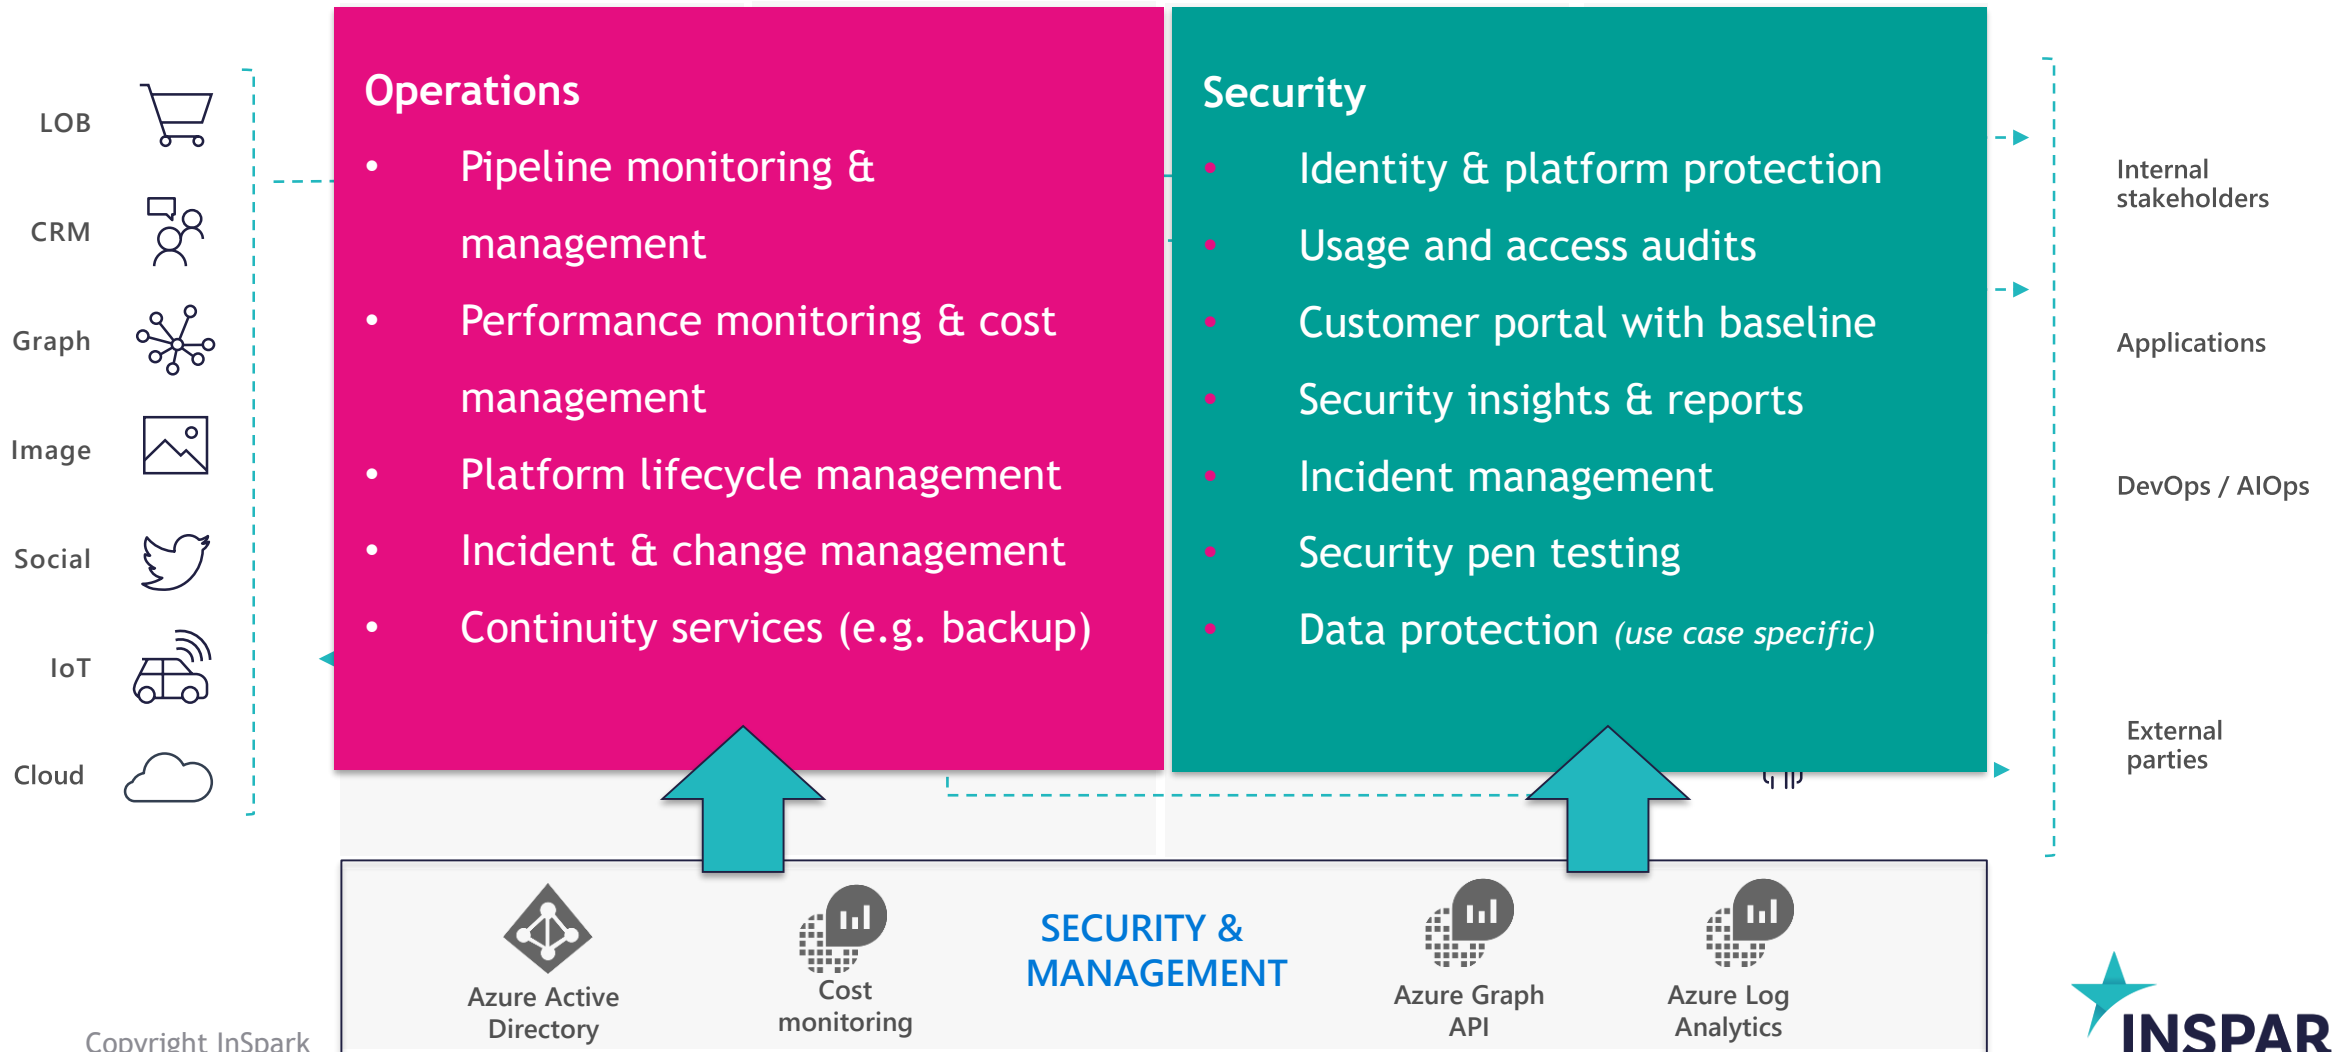

03 SECURE & (COST) MANAGED BY DESIGN

04 ADVANCED MONITORING

DATA PLATFORM IN 10 DAYS

MANAGED OXYGEN COMPRISES

DATA-DRIVEN INNOVATION

Expert Desk

Our experts are available 24/7 for all your Data & Azure questions

Proof of Value(s)

New data innovations applied within your organizational context

In control

You are in control; secure access for InSpark, your own department or another digital transformation partner

Data Adoption

The outboard motor to strengthen data initiatives and a data culture within the organization

Deployment success

Additional support from InSpark specialists in projects where necessary

REFERENCES

FACILICOM

SAP DATA ACCESSIBLE VIA OXYGEN & POWERBI

Reports from SAP via PowerBI

Facilicom uses the Managed Oxygen data platform to make reports accessible via PowerBI. Source systems, including SAP, are hybridly connected to the organization-wide data lake.

Managed & Monitored by Oxygen

Facilicom chose Microsoft because of its competitive offer compared to QlikView, and chose InSpark because of its high-quality technological knowledge and the carefree character of its Managed Oxygen service.

RIJKSMUSEUM

OXYGEN PROCESSES VISITOR DATA FROM AMSTERDAM ICON

Define trends and boost ticket sales

By providing insight into the sales figures, the Rijksmuseum is now able to exactly measure how many tickets are sold through which channels and to predict the visitors' flows.

Efficient & effective deployment of personnel

By gaining insight into ticket sales and the number of reservations, the Rijksmuseum is now able to take account of staff scheduling and the number of rooms to be reserved in advance.

RIJKS MUSEUM

OXYGEN DEPLOYED FOR HIGHER TRAFFIC SAFETY

Improving traffic safety

Fewer accidents in the transport sector and thus increasing traffic safety: that is the goal of TVM. As a pioneer in their field, the transport insurer wants to make smart use of data. In order to demonstrate the link between truck drivers' driving behavior and damage caused by accidents, TVM asked InSpark for help.

From data to insights

Near-miss accident reports are processed on the map of Europe into a visual representation of dangerous locations.
