# Intapp Walls — the most-trusted confidentiality and enforcement management solution for law firms

Firms face growing scrutiny and expectations around how they handle confidential information. Firms have traditionally managed confidentiality concerns by relying on the professional due diligence of lawyers and staff. But with information distributed across various firm systems and the reliance on ad hoc, manual approaches to security, it's nearly impossible to confidently ensure that every system has been secured. These shortcomings of manual processes put client data, matter information, and reputation at serious risk.

Designed to help firms achieve a more reliable system for handling confidential information, Intapp Walls provides a centralized solution that set ups, monitors, enforces, and reports on the entire confidentiality lifecycle, offering unprecedented control across the entire firm. Firms can limit access to sensitive matters across applications without impacting user productivity or convenience.

How Intapp Walls provides peace of mind

- Centrally protects client and matter information
- Ensures compliance with firm policy and regulations
- Enables an effective response to security audits
- Reduces manual confidentiality management
- Automates maintenance and enforcement
- Prevents attempted information breaches

Key features

Centralized security management

Secure and manage protection beyond document libraries by locking down other key business systems where sensitive information is stored, such as Microsoft Teams or Intapp Conflicts.

Complete visibility

Gain real-time insights into policy details and volume, types of ethical walls, affected parties, and prevented breaches.

Audit assistance

View and export a documented audit trail as required by a court, clients, or government agencies.

High configurability

Tailor ethical walls to narrow security on confidential documents, provide access to select people and groups, and implement varying levels of conflict warnings.

Automated notifications

Enable notifications to be scheduled, run on demand, or triggered based on user activities or events, providing information regarding ethical walls, user acknowledgments, and matter teams.

Real-time enforcement

Ensure ethical wall maintenance and adherence to firm policy by enabling real-time enforcement and automatically updating access rights in response to business requirements.

Self-maintaining access management

Automatically detect changes to client or engagement teams to ensure the right people have access at all times and correct any unauthorized modifications.
