

# CLOUD CONCIERGE- CYBERSECURITY FOR OFFICE 365 & AZURE

Protect your company against threats is no longer a choice, but a necessity

Of malware is delivered via email

Of enterprises experienced a ransomware attack in the past year

## What We Can Do for You

**Detect:** Built-in Artificial Intelligence will help provide high accuracy indicators, when detecting malicious insider and outsider activity.

**Identify:** Our advanced engines will correlate data from different users and apps to help determine complex and unusual activity.

**Analyze:** Cybersecurity experts will analyze events and logs in-depth, to identify the root and cause of security alerts.

**Notify:** InTWO will notify your organization on the different malicious events received.

**Remediate:** Action to remediate or dismiss issues will be done automatically or with prior authorization by our clients.

## Benefits

**24/7 monitoring,** analysis, and remediation in realtime.

**Minimize risk and improve cybersecurity posture** in your organization.

**Prevent data breaches** that may lead to profit loss.

**Rapid detection and response** to existing and emerging threats.

**Put your organization ahead of the competition** by adding an extra layer of protection to your profile.

**Protect from possible threats** that can harm your business.

## Why Choose us?

We use the most powerful cybersecurity platforms which will allow us to take preventive and remedial action the instant that malicious activity has been identified in your organization.

**We have the right solutions for your company!**
