

PROJECT ELEVATE

Turn Microsoft 365 Copilot into Everyday Productivity

Every organization is investing in AI. But very few are seeing real change.

Project Elevate helps organizations bridge that gap through a structured adoption journey focused on people, practical use cases, and lasting behavior change.

Many organizations invest in Microsoft 365 Copilot with high expectations. The technology is ready. The challenge is helping employees understand where it fits, build confidence, and make it part of the way they work every day.

Ask Yourself

- Do employees have access to Copilot but are still unsure how to use it effectively?
- Does leadership support the idea but lack a clear plan to roll it out?
- Are teams experimenting on their own, with no consistent approach?
- Was training completed, but day to day usage still remains low?
- Do you want measurable business outcomes, not just software adoption?

If you answered yes to any of these, Project Elevate is built for you.

Why Project Elevate?

Most Copilot programs focus on features. **Project Elevate focuses on helping people build new ways of working.**

Every session is designed around real business scenarios, familiar workflows, and practical outcomes so employees can immediately apply what they learn. The result is greater confidence, stronger engagement, and better value from your Microsoft 365 Copilot investment. Built on the ADKAR change model, so adoption sticks well after training ends, not just during it.

One Framework. Three Adoption Journeys.

Leadership Cohorts

Help executives understand where Copilot fits into business priorities, decision making, and organizational goals.

Best when

- Top-down sponsorship needed
- Concentrated, senior audience

Train The Trainer

Develop internal champions who can guide teams, answer questions, and sustain adoption long after rollout.

Best when

- Limited external delivery window
- Strong learning culture already exists

Organization Wide Deep Dives

Enable departments through role specific workshops and hands on learning connected to everyday work.

Best when

- Broad workforce with diverse functions
- Adoption depth matters more than speed

What Your Organization Gains

Structured Adoption Journey

A clear path to move from Copilot access to everyday usage.

Role-Based Learning

Practical learning connected to real roles and workflows.

Change-Ready Teams

Teams gain the confidence to adopt new ways of working.

Measurable Business Value

Adoption outcomes tied to productivity and business impact.
