

Offer seamless, secure digital experiences at scale, with Integral's Identity Broker Solution

Don't let scale stand in the way of seamless, secure identity management

As more enterprises and governments provide digital services to employees and citizens, robust identity management becomes critically important. The greater the volume of digital information within an enterprise or government--and the more people interacting with this information--the more opportunities arise for cybercriminals to find 'in-roads'. Providing digital services at a vast scale, whether to employees or citizens, can quickly become complex and cumbersome, affecting the quality of the user experience.

When you challenge your development teams to: do things better, innovate and transform proven processes and technology, and set your business up for the next 5 years, it is not something you take lightly. Leveraging NTI's internal expertise and innovative culture combined with Integral's specialist consulting team, the initiative resulted in the right choice: Red Hat OpenShift Platform.

OpenShift is the scalable deployment platform for Integral's Identity Broker Solution

While the market offers several identity management technology solutions, few provide reliable, secure, and effective management at a population-wide scale of millions of users. Many existing identity management approaches are for internal users of enterprise systems only, not for external citizen users across an entire nation. These solutions can also be slow, hard to use, and inhibit reliable, seamless access to important information.

This is where Integral's sophisticated Identity Broker Solution - leveraging Red Hat Single Sign-On and deployed on Red Hat OpenShift - can help.

Evolve your approach to identity management with Integral and Red Hat

Integral's Identity Broker Solution is the product of over five years' continuous development and testing. It is designed to provide both enterprises and governments with secure, reliable identity management that can accommodate millions of potential users.

Users enjoy a seamless, secure, and highly personalised digital experience, whether they are accessing essential government services, completing healthcare or educational transactions, or using self-service facilities at work. Integral provides identity and access management to support identity management, identity federation and single sign-on - at scale.

Red Hat

Integral

Why trust Integral with your large-scale identity management?

Approximately 50% of the Australian population already relies on an Integral Identity Broker Solution for government services and transactions. By implementing Integral's Identity Broker Solution in your enterprise or government agency/department, you can benefit from:

- **Comprehensive installation and set-up** Integral's solution is a repeatable service co-creation which extends the Red Hat Single Sign-on (or upstream Keycloak) platform. Integral also offers Red Hat Single Sign-On and Keycloak installation and configuration services, as well as establishment of appropriate identity realms, linking to identity providers and onboarding applications.
- **Ongoing managed services** Integral offers comprehensive managed services for both Red Hat Single Sign-On and Keycloak as part of the overall solution.
- **Flexible, open-source platform** as Integral's Identity Broker Solution is built on open-source technologies, it can rapidly adapt to new compliance and regulatory changes, emerging Identity standards and more. While ideally deployed as a workload on Red Hat OpenShift, variants of the deployment platform can also be provided, including Azure Red Hat OpenShift (ARO) and Red Hat OpenShift Service on AWS (ROSA).

- **Cost-effective pricing model** the pricing structure is based on a 'per core' model, rather than 'per user', making it an attractive option for large-scale deployments.
- **Industry compliance** Integral's specialists have deep technical and practical expertise in all industry standards, including Consumer Data Rights (CDR), Trusted Digital Identity Framework (TDIF), and Financial-grade API (FAPI).
- **Experience** the Integral team has extensive experience delivering whole-of-government Identity Broker solutions to citizen populations within Australia, at both state and federal level.
