

Microsoft Security Anywhere

Empowering employees to securely work from anywhere.

Microsoft Security Anywhere – this workshop is dedicated for today's security stakeholders to help develop a comprehensive strategic plan based on Microsoft's most effective practices for protecting IT environments. The workshop addresses the modern cyber threat landscape and corresponding methods for detecting and mitigating potential threats. **Microsoft Security Anywhere** addresses security issues based on **Microsoft's holistic approach** to Security in **Local, Cloud, Hybrid** and **Multi-Cloud** environments for both single workstations and entire server suites. The workshop will provide an in-depth analysis of your current environment along with **identifying risks**, vulnerabilities and how to secure them as quickly as possible. The workshop will also address the issue of information flow security through the practical use of **Microsoft Information Protection** solutions. Practical presentation of **Microsoft Security solutions** will be based on carefully selected scenarios most similar to the current situation in which the organization finds itself.

As the summary of the workshop, the Expert Engineer will prepare a **report divided into actions** that require an immediate response and those that should be performed in the near future. Based on the summary report and discussion, **a set of recommendations** will be prepared regarding the security strategy, with key initiatives and next steps for further development.

Expected workshop duration: 6 hours - plus additional data collection phase - 2 to 4 weeks.

Trainer : an experienced Expert Engineer from Integrated Solutions

Dedicated for: The workshop is dedicated to everyone interested in security issues and who wants to acquire advanced practical knowledge in this area.
