

# Managed Services

## in a flexible billing model

• CyberSecurity • Cloud • **Managed Services**

Despite the scarcity of security experts, **managed services** are one of the best ways to ensure the highest levels of security. Our approach to delivering them sets us apart. We can provide quick access to services based on cutting-edge technologies, as well as the **expertise of our team**, in a time-limited financing model.

The emergence of new threats and the imposition of binding legal regulations force businesses to implement appropriate security solutions, which is difficult given the growing shortage of experts. We provide selected services under the Managed Services model, ensuring process continuity and **increased efficiency**. Our managed services offer is geared toward businesses in need of security assistance.

### • Managed Services

**We offer managed services with a customizable billing model.**

We will continuously manage the processes entrusted to us while upholding the highest security standards. We will safeguard your most valuable assets: information, resources, and reputation. You will have access to the most advanced technologies, as well as expert service and flexible financing.

### • Managed Cloud Services

**We assist with cloud adoption and change management.**

### • Managed Security Services

**We safeguard modern workplaces.**

## How do we collaborate with Clients?

### 1 Analyses and audits

We identify current solutions, examine and assess their completeness, adequacy, and effectiveness.

### 2 Solution roadmap and selection

We suggest solutions to help you close existing security gaps and recommend action priorities.

### 3 Service provision in the SLA model

Our Managed Services can help with initiatives and recommendations.

## Security-as-a-Service Model

Decide which areas you want to protect and select the services for your needs. We will provide protection on many levels or we will focus on the layers you choose.

### Schema

Layer name  
Class of the solution

SERVICE

Incident management  
*SIEM*

MSET

Managed SIEM  
Evaluation & Tuning

Privileged Account  
Management  
*PAM*

MPAM

Managed PAM

Anomaly Detection
