# Microsoft Security

## FPT Software's managed security service for Microsoft Sentinel and Microsoft Defender for Endpoint

Security teams are experiencing the impact of the Data Age: rapid digital transformation, most notably an aggressive shift to cloud scale of speed, volume and evolution of the threats. As the complexity of the threat landscape continues to increase, we encourage support for ongoing efforts to combat this trend. And we believe that uplifting your posture with a robust security program that incorporates the use of cutting-edge technology and managed security services is one of the best ways to address this challenge.

Minimize the load of security teams that are manually analyzing thousands of alerts per day. Our team of experts can step in to help you implement a robust threat detection and response function, allowing you to focus on operationalizing your evolving business.

FPT Software leverages Microsoft security technologies with advanced automation and data analytics to respond quickly and remediate confirmed incidents and keep your cybersecurity program on pace with potential harms.

## Customer benefits

- **Clear metrics** and reports to measure success

- Fast time-to-value with a **blazing fast onboarding time** of less than a week

- Leverage **data analytics** and **Microsoft technologies** to increase productivity

- A trustworthy extended team with **certified experts**

- Receive **fully transparent** insight and data
