

Intellect.ai: Intelligent Retail Planning Agents

Transform your retail operations with our comprehensive suite of AI-powered agents. From strategic financial planning to real-time in-season optimization, Intellect.ai delivers end-to-end solutions that unify corporate strategy with merchandising execution. Our intelligent agents work seamlessly together, creating a connected ecosystem that maximizes profitability, reduces waste, and ensures the right products reach the right customers at the right time.

15+

AI Agents

Specialized intelligent agents covering every aspect of retail planning

4

Core Pillars

Integrated solutions from financial planning to in-season management

100%

Real-Time

Dynamic optimization powered by live data and predictive analytics

Strategic Planning: From Finance to Product

Merchandise Financial Planning

Automate budgets, track performance, and reconcile discrepancies with our Financial Planning & Reconciliation Agent. Enable dynamic scenario planning and optimize Open-to-Buy budgets in real-time while delivering executive insights through comprehensive dashboards.

Line Planning

Bridge strategy and product with automated line plan generation, flexible scenario modeling, and AI-powered style similarity analysis. Our Competitive Intelligence Agent monitors market positioning to refine your product strategy and maintain your competitive edge.

Assortment Planning

Create localized product strategies with automated seed plans, comprehensive optimization scenarios, and data-driven size and pack configurations. Generate precise purchase orders that align with demand and financial targets for every location.

Key Benefits

- Unified financial and product strategy
- Dynamic what-if scenario modeling
- AI-powered market intelligence
- Seamless collaboration across teams

Outcomes

- Maximized profitability across channels
- Reduced excess inventory and stockouts
- Optimized product mix by location
- Faster, data-driven decision making

In-Season Management: Real-Time Optimization

Stay agile throughout the product lifecycle with our In-Season Management & Optimization agents. Leveraging real-time data and predictive analytics, these AI-powered agents dynamically manage inventory, adapt to emerging trends, and maximize profitability across all sales channels. From initial allocation to markdown optimization, ensure your operations remain responsive and profitable.

01

In-Season Allocation

Strategically distribute initial inventory and continuously adjust allocations based on real-time sales and demand fluctuations to optimize stock levels across all locations.

02

Intelligent Replenishment

Automate inventory replenishment with predictive algorithms that determine optimal quantities and timing, ensuring products are always available where customers want them.

03

Sales & Trend Analysis

Monitor performance and analyze emerging market trends in real-time, providing predictive insights for rapid product adjustments and promotional strategies.

04

Smart Rebalancing

Execute optimal inventory transfers between locations, mitigating overstock situations and ensuring product availability in high-demand areas.

05

Markdown Optimization

Utilize advanced algorithms to recommend optimal markdown strategies, maximizing recovery while minimizing margin erosion based on inventory levels and sales velocity.

Continuous Monitoring

Real-time data analysis and automated decision-making

Channel Coverage

Optimization across all retail locations and channels
