Microsoft Teams Environment Report & Health Check

Assess your Microsoft Teams sprawl and find out how to solve it
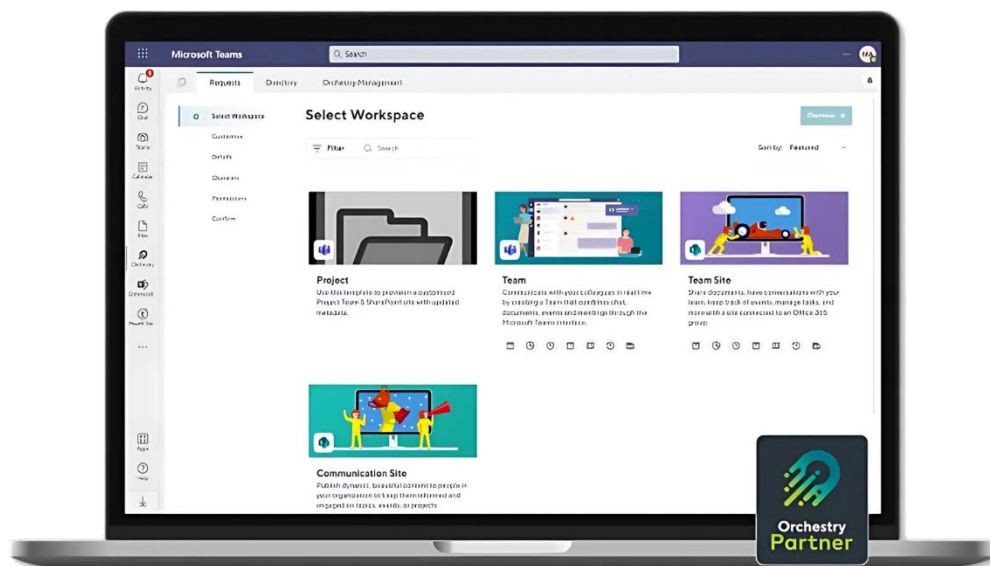

Microsoft AppSource

Clean up your estate and allow for greater ongoing information management and governance

Many organisations realise that the information they are storing and sharing in Microsoft Teams isn't being managed effectively. Do you know how many inactive workspaces you have? Do external guests have access to your data? Are your compliance obligations being upheld across Microsoft Teams? Is there a risk of information loss? Book a Microsoft Teams Health Check to find out. How healthy is your Microsoft Teams estate? Let us help you find the answers and plan for a better, more manageable future.

Regain control of your Microsoft Teams

Your organisation has deployed Microsoft Teams but there was no Governance Plan in place to protect and maintain this environment. Now you are facing a growing sprawl of user-created Teams, SharePoint sites, file duplication and multiple versions of documents in different locations. It's okay, you are definitely not alone.

In partnership with Orchestry, we will use their toolset that provides effective management of your environment by governing Teams and SharePoint Online sites through provisioning and full lifecycle management.

Microsoft Teams Health Check

The Microsoft Teams Environment Report and Health Check is an information management assessment that will provide you with clear and concise data, along with best-practice recommendations to make informed decisions.

We will gather data on the status of your environment, compile the results in a report and summarise recommendations for better management going forward, as well as highlighting areas that are already in good health. We will propose strategies to get your estate back on track, and keep it that way.

- Regain control and put an end to Teams sprawl
- Clean up abandoned Teams and duplicate content
- Set up a long-term Governance Plan
- Provide Adoption Support and increase satisfaction
- Define recommended ways of working with Teams
