

INTERACTIVE CLOUD & MANAGED SERVICES

CLOUD FLEX FOR AZURE

CLOUD FLEX FOR AZURE

QUICKLY BOOST YOUR CLOUD CAPABILITY WITH ACCESS TO A SCALABLE TEAM OF AZURE CERTIFIED EXPERTS.

Does your team have the right skills, right now?
In Australia, 50% of all workloads are predicted to be in public cloud by 2023, however lack of internal cloud skills remains a top 5 challenge for Australian IT leaders.

Without the necessary cloud expertise, migrating and managing multiple public cloud platforms becomes tricky. The risk of not getting it right can result in cloud bill shock, security issues, compliance gaps – or simply a long list of public cloud projects that never seem to progress.

Traditional solutions, such as resource augmentation or contracting can be expensive and offer limited flexibility for changing scope, short-term projects or multi-cloud scenarios.

HOW INTERACTIVE CAN HELP:

Cloud Flex instantly boosts your Azure capability by providing scalable, pay-as-you-go access to a dedicated Azure project team.

Access the shared knowledge and skills of a Cloud Flex team, as and when required. Scale-up access and usage during busy project periods and scale back down over quieter months.

Cloud Flex gives you access to a blended team including:

- **Project Manager – Agile expert**
- **Lead Solution Architect – Deep platform and industry knowledge**
- **Specialist Cloud Engineer – DevOps and automation expertise**
- **Associate Cloud Engineer – Azure Associate Certified**

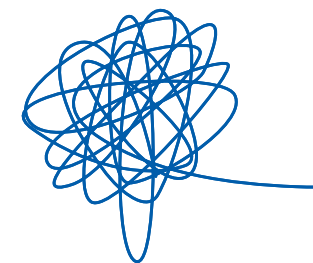

From migration and optimisation to security remediation and well-architected frameworks, Cloud Flex helps you deliver quickly and to best practice on your Azure cloud project hit list.

Interactive has the expertise we need to support our multi-cloud environment. Interactive is an extension of my team and I can't speak too highly of their service delivery capabilities.
