Product Information

LinguaSkin®

LinguaSkin creates multilingual interfaces for web applications with minimal effort, cost and time.

If you have an online service or web application that you want to be available multilingually, the only solution used to be to redevelop the application. This is a slow and expensive process. Often it is impossible as the application is owned by someone else who lacks the motivation, resource and/or funding to make the necessary improvements.

Quick, Easy & Secure

LinguaSkin doesn't require any changes to the target application, so eliminates this cost, hassle and barrier. It will also work for third party applications including Cloud/SaaS based systems.

LinguaSkin creates a 'wrapper' for an application, allowing all aspects of the user interface to be replaced by pre-prepared translations which can be easily edited, ensuring language quality with easy maintenance. A language switcher is inserted on all pages, enabling users to select their preferred language at any time.

LinguaSkin is secure too. Deployed to your network infrastructure or as a Cloud service from us. Proven through many implementations, often in security sensitive environments, LinguaSkin complements and can even improve application security.

Works for Any Application

LinguaSkin works well for content web sites, but is unique and compelling for web-based applications.

It has been used for HR, CRM, Portals, education, recruitment, housing, planning, online payments, admissions, leisure & many others.

A universal solution for all web applications and content sites!

Non-Invasive: No changes to the target application

Rapid Implementation: Can be implemented in a few days

Language Quality: Translations are prepared in advance

Active Offer: Language switcher throughout user interface

Multiple Languages: Adding languages just needs translation

Secure: Can be on your platform, proven to enhance security

Flexible and Dynamic: Translations edited in moments

Works for all Applications: 3rd party, on premise, hosted/SaaS

Online Management Toolset: Translation & configuration

Product Options

LinguaSkin is available in 3 editions (see next page/overleaf):

- **Standard**: Provides all the core capabilities to add multilingual capabilities to Web applications.
- **Premium**: For more complex and higher volume scenarios, with tools to optimise management.
- **Enterprise**: Large, complex and high volume. This edition scales up to the toughest challenges.

We provide a full services package for implementation, configuration, translation and support. Customers and partners can provide any or all of these using an optional online toolset.

	Standard	Premium	Enterprise
Language Management and Selection			
Multiple languages (LTR, RTL, incl non-Latin)	Up to 5	Up to 15	Unlimited
Language selector insertion	Standard	Flexi	Custom
Language tagging	✓	✓	✓
Translation export, import and re-use (within an application)	✓	✓	✓
Language schemes		✓	✓
Translation repository (across all applications)		✓	✓
Language usage metrics			✓
Proxy Capabilities			
Custom domains (incoming)	1	Up to 5	Unlimited
Proxy mapping (single target) and rewrite rules	✓	✓	✓
HTTP redirects (incl to HTTPS)	✓	✓	✓
All non-proprietary/non-compiled content types	✓	✓	✓
HTTP exception handling	✓	✓	✓
Caching control	Auto	✓	✓
Basic path translation		✓	✓
Multi-target proxy mapping		✓	✓
Complex applications (JS, Angular, Dynamics, React, etc)		✓	✓
Websocket handling and content replacement		✓	✓
Performance optimisation (per-lang caching & tracing stats)		✓	✓
URL whitelisting & blocking		✓	✓
Complex path translation			✓
HTTP header and cookie manipulation (block, modify, insert)			✓
High-volume performance (internal caching and pass-through)			✓
Matching & Replacement			
Translation replacements	✓	✓	✓
Parameterised replacements	✓	✓	✓
Standard target sets (Global, URL, querystring & lookup)	✓	✓	✓
Scraping (HTML: parsing, other: Regex rules)	✓	✓	✓
Encoding handling and management	Standard	Advanced	Custom
Differential scraping		✓	✓
Advanced target sets (shared, complex criteria)		✓	✓
Content monitoring (for static & unauthenticated pages)		✓	✓
Replacement inversion (Regex & lookups)			✓
Deployment & Support			
Deployments (Test, Staging, Prod, etc)	2	3	Unlimited
Instances per deployment	1	3	Unlimited
DevOps integration			Custom
Support SLA	Optional	Optional	Premium
