

IMS PPM Projektveiviseren

PPM by Power Platform

Providing the project manager with a user-friendly project management tool enables the entire organisation to take part in the project with efficient tools based on familiar user interface and functionality. An updated plan and metadata is at the core of engagement from both project members and management.

An implementation of IMS PPM Projektveiviseren is swift and focuses on the on-boarding of the users. The tool itself consists of standard Microsoft components like Office365, Teams, Project for the web, Roadmap, etc. We configure and set these "building-blocks" up to become a complete PPM-solution. Intersoft provides training (if required) and weekly status meetings for a period of 1-2 months to provide support and adjustments to the solution. The aim is for the customer to be self-sufficient after this period.

Why customers use IMS PPM Projektveiviseren

- Efficient planning tool
- Supporting project managers with templates and checklists
- Collaboration in Teams
- Risk and issue management
- Utilising Teams, Project-for-the-web, Office365 etc.

Project portfolio management

- Sound decisions based on entire portfolio
- Complete risk analysis
- Compare projects within portfolio

Improved decision-making quality

Project methodology

- Projektveiviseren
- Comparable projects
- Lessons learned

More efficient and streamlined project management

Resource management

- Utilise resources
- Predictability
- Workload

High utilization of all resources

"IMS PPM will improve the decision making and provide better information through updated information and reporting. It will make project managers efficient thus improve our ability to predict and plan for future outcomes and value."

- Thormod Spilling, Department Manager, ROR-IKT
