

Microsoft PPM

Project for the web and Project Online

Enable sound decisions as a result of seeing the project portfolio as a whole at the same time as providing an efficient tool for project managers for them to run and complete the projects. This increases success rates, lessons learned and motivation.

A complete implementation of Microsoft PPM as a business application will typically include a design-phase, set-up-phase and a test/roll-out-phase. The implementation can be done with an agile approach; implementing functional areas one by one, thus ensuring user adoption and realisation of benefits from an early point in time.

Why customers use Intersoft for implementing Microsoft PPM-solutions

- Efficient planning tool
- Streamlined reporting / Analysis of entire portfolio
- Utilisation of resources
- Risk and issue management

Project portfolio management

- Sound decisions based on entire portfolio
- Complete risk analysis
- Compare projects within portfolio

Improved decision making quality

Project methodology

- Efficient project methodology
- Comparable projects
- Lessons learned

More efficient and streamlined project management

Resource management

- Utilise resources
- Predictability
- Work load

High utilization of all resources

"The solution from Intersoft will improve collaboration and foreseeability in the execution of the project process. The quality of the decision making will improve as management will be more proactive. The projects themselves will be executed on time, within budgeted costs and with high quality."

- Fredrik Svalestuen, Production and process manager, Veidekke Anlegg AS
