

Name: Power BI Embedded POC

Cost: \$10K *estimated*

High level description:

Integrate visually stunning interactive reports directly within your application or website. Maintain total control over the end user experience while allowing secure distribution of reports to users inside or outside of your organization without requiring per-user Power BI Pro licenses.

Detailed description:

There are many different patterns that can be followed for Power BI Embedded implementations. We will help you avoid costly mistakes by guiding you through the process of determining simplest and most cost-effective patterns to follow for your specific scenario. Start with our Free Assessment where we will review your current environment and reports, document requirements, discuss licensing options and recommend an appropriate path forward. We will deliver a basic Power BI Embedded implementation in a test environment following the best practices determined for your use cases along with all the documentation you need to implement your Embedded solution in production. If desired, we will also provide a detailed proposal for production implementation and ongoing support.

Deliverables:

- Detailed architectural documentation including all components impacted by your specific implementation scenario
- Full source code along with documentation for any modifications required within your website or application in order to accommodate the Power BI Embedded POC
- PBIX files and documentation related to any changes required within Power BI to support your Embedded implementation

Pricing:

Power BI Embedded solutions range from simple to complex. After completing our Free Assessment we'll provide a quote based on your needs, usually landing around \$10K for delivering an initial POC along with supporting documentation.
