

Record Clone

The WORK 365 Record Clone App for Microsoft Dynamics 365 allows 1-Click Cloning of any record in CRM. The related child records can be cloned too!

Features

Cloning is one of the methods which can reduce the time spent on data entry, particularly if the data being entered is similar. Simply use the Record Clone App to create an exact copy of the original record and edit the new information as needed.

- Ability to clone System entities as well as Custom and their related child entities
- Option to exclude fields that are not required to be cloned
- Once cloned or copied, the newly created record pops up on the User Interface
- Ability to Clone multiple records too (making X Clones of a single record in a click)
- Can also Clone records from Workflows

Work with

- Dynamics 365 Online
- Microsoft CRM 2011,2013 (Request Custom Build)
- Microsoft CRM 2015,2016
- Dynamics 365 Enterprise

“Works great. We often have need to clone 5 or more records and this achieves it in seconds... Highly recommended! Exceptional service!”
