Ideation & Vision

Understanding requirements. Developing a vision of technology. Design a solution.

For us this typically includes

- Question requirements and their priorities
- Analyze the technical environment
- First conception and technical architecture design in the Microsoft environment
- Outlook on implementation phase and methods
- Technology exclusion with checklists
- Technology vision
- Solution path

Results

- First conception and architectural vision
- Procedure for the design phase
- Outlook on implementation and roadmap

The IPI takes care for

- Moderate 2-3 remote sessions with 1-2 hours each
- Document the solution idea incl. architectural vision
- Plan the design process and outlook on the best way for implementation procedure
- Presentation of results and planning of the next steps

You support us in

- Participating in workshops
- Providing information about requirements or access to existing systems
- Making decisions if necessary
