

1 Day Azure AD and Microsoft 365 Security Assessments by IQ in IT

What to expect with our comprehensive assesment:

- Review Microsoft secure score and recommend actions to improve results
- Review of current security features available under current license scheme
- Recommendation of additional security features to be implemented, for example Advance Threat Protection
- Azure AD security review, vulnerability assessment and recommendation for actions
- Legacy device connections review
- 2Factor Authentication review
- Geographical restrictions review and recommendation
- Mailbox access review
- End Point Management security review

Why should you consider reviewing your security:

- Understanding your environment vulnerability
- Recommendation for sthrenghtening your security
- Fresh pair of eyes
- Understanding different ways of securing Azure AD

* review items vary based on services and licenses available in your environment
