Cloud Security

All the power of Cloud in a secure way

Cloud services are continuously developing, and security threats get more advanced. We have built a solution to ensure that you are covered and always in control.

Governance & Licensing   **Immediate Response**   **Action Plan**   **Security Experts**

IRONSTONE

The Security Report

We have created a solution that provides a thorough analysis and useful insights into your setup. It identifies and assesses risk, as well as makes recommendations for security enhancements. We have built the solution based on known frameworks, such as ISO27001, NIST, and CIS. Combining a solid foundation with best practices from Microsoft and our Cloud expertise.

You receive a full security report with meaningful security metrics on Identity, Office 365, and Azure. Also, each metric aligns with security frameworks for effective governance and compliance control. The trend analysis on the metrics will, over a period, provide you with a solid basis to optimize and improve your security score.
