

## Join ISCG Hackathon:

### 6h low-code workshop with mentors

### using Power Platform, Copilot Studio & Power Automate to solve real business cases and drive digital transformation.

We invite you to participate in a unique workshop event: the Power Platform Hackathon, aimed at gaining practical knowledge of Microsoft Power Platform tools (Power Apps, Power Automate, Copilot Studio) and creating a real solution for a selected business challenge in your organization.

The Hackathon is an intensive 6-hour working session, held online (via Teams) or on-site. Supported by an experienced mentor from ISCG, the client's team works on a previously defined use case. This is a perfect opportunity to engage both business and IT employees around the ideas of digital transformation, process automation, and a culture of innovation.

#### Why should you participate?

- You create a ready-made business solution during one working day.
- You work 1:1 with an ISCG mentor - architect or in a group with other companies (in separate workspaces).
- You learn through practice, not theory – results are tangible after just a few hours.
- You explore the potential of low-code and AI in the Power Platform environment using Copilot Studio.
- You gain a plan for continuing the implementation and further development of the solution after the event.

#### How does it work?

- Selection of participants and identification of business challenges.
- Preparatory meeting with an ISCG mentor (inspirational part and design thinking).
- 6 hours of the hackathon, working on a specific use case.
- Summary and plan for further collaboration.

The ISCG Hackathon is a proven formula that engages teams, builds competencies, and delivers real business value. The event is aimed at Enterprise sector companies and medium-sized organizations looking for an effective path to digital transformation.
