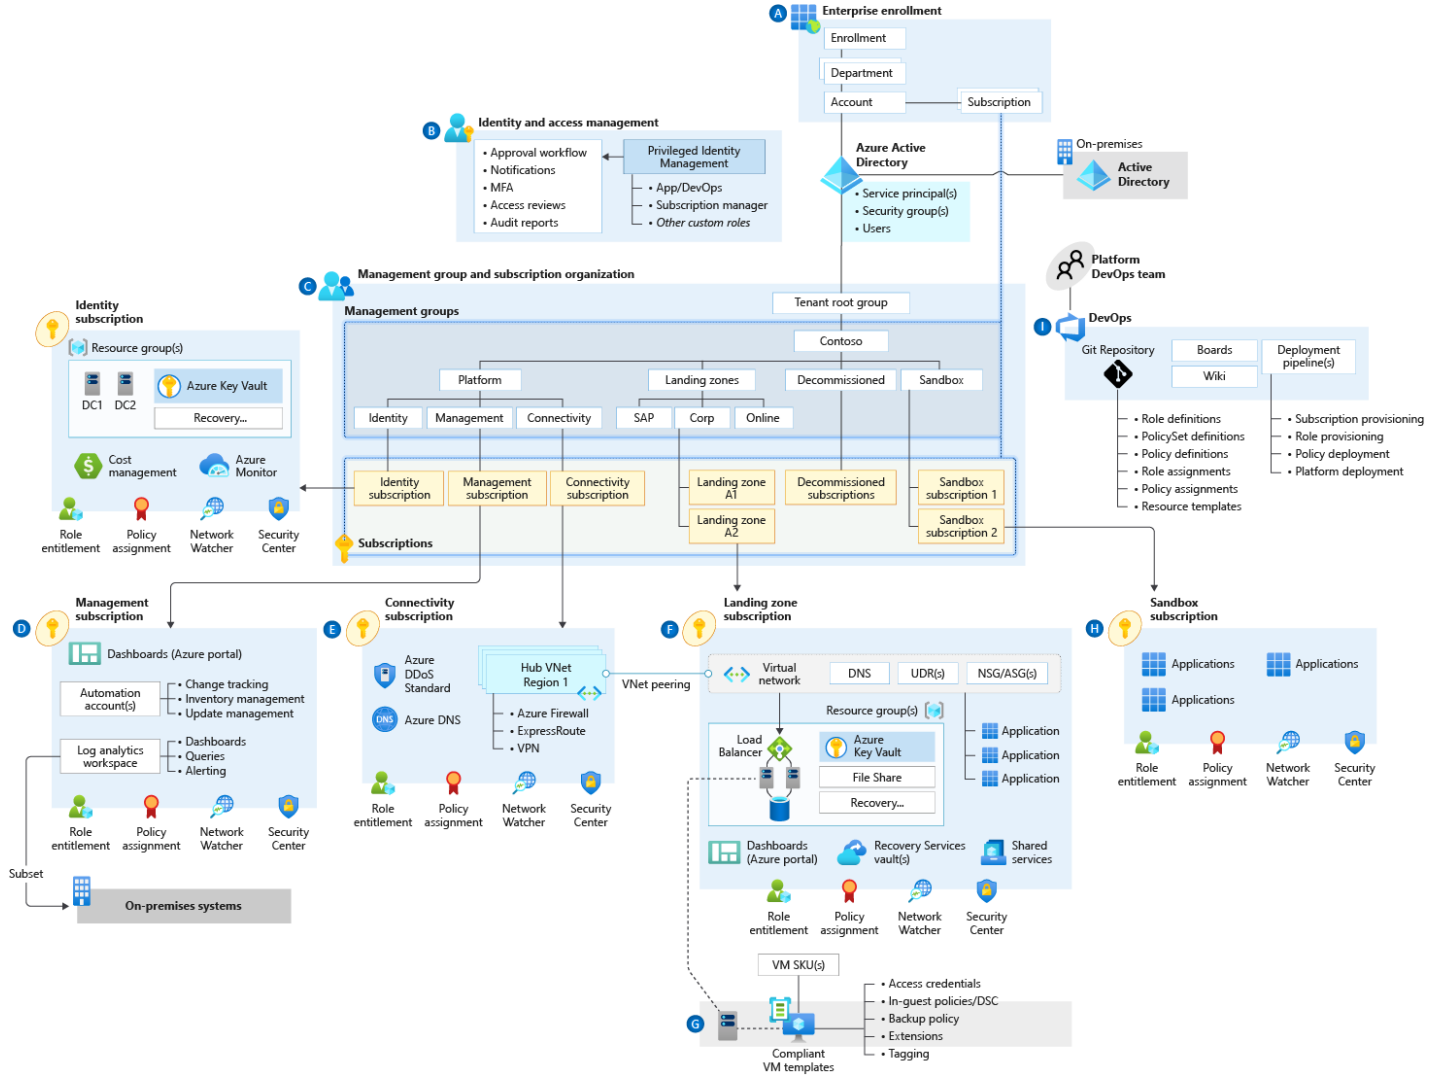
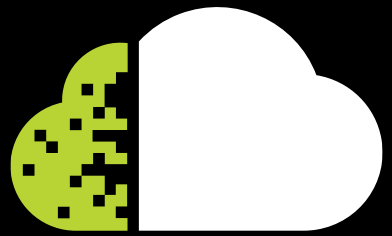
deploy

Azure Landing Zone

- Enrollment (Active Directory Integration, Azure Multi-partner)
- Governance (Policies, Management Groups and Azure Blueprints)
- Security (Azure AD Identity Protection, Security Center, Advanced Threat Protection, & Zero-trust security model)
- Network (Hub/Spoke, Virtual WAN topologies)





migration & modernization

migration	modernization
Program Management & Governance	
Discovery & Assessment	**Remediation, Re-Factoring & Deployment**
Migration & Modernization Architecture & Planning	**Legacy Modernization**
Workload Re-Hosting	**End to End Testing**

Migrating applications & workloads to modern cloud platforms consists of:

- Enabling them to run on current & supported operating platforms, middleware, & databases
- Redeploying them to the target cloud using a deployment pattern providing targeted performance

Modernization application involves:

- In-depth analysis of applications at the code level reveals application dependences & level of remediation needed
- Develop a detailed design of the modernized application. This is followed by required code conversion, remediation, & or new development
- Create detailed blueprints for the modernized application & detailed execution plans
