Power BI Analytics Workshop

Identify and solve your data analysis challenges with our Power BI Analytics workshop and get inspired with actionable solutions to drive your business forward! Let's transform your data approach together!

1

INSPIRING VALUE DISCOVERY WORKSHOPS

We will inspire you with the value of Power BI, discussing the ones suitable for you

2

CUSTOMER REQUIREMENTS ANALYSIS

We will gather, classify and prioritize your requirements towards Data Analysis

3

WORKSHOP REPORT & RECOMMENDATIONS

We will create a report, share workshop findings and prioritize areas of development

Data Analysis transformation

Data Analysis Workshop helps to design Digital Workplace delivery plan. The plan leads to **significant business benefits** and a quick return on investment.

CHALLENGES

Organizations face numerous data analysis challenges, often unaware of the complexities involved, which hinder their ability to make informed decisions and fully leverage their data assets.

IDEAL SOLUTION

A comprehensive report that consolidates all data analysis challenges into a single document, detailing the prioritized solutions that need to be implemented to enhance data analysis capabilities.

DESIRED OUTCOMES

Clear understanding of data challenges, a prioritized action plan for implementing improvements, and the ability to leverage Power BI for significant business benefits and measurable ROI.

Agenda

- Introductions – How we work with data?
- Inspiration (Exercise at the end – How I can use POWER BI in my work)
- Collecting and classifying common requirements
- Identifying additional/uncommon requirements (focus on specific problems raised by participants)
- Discussing potential AI support in the area
- Demo of a sample report from the Retail industry

Ways of Working - MoSCoW

The MOSCOW survey is used in the workshop to prioritize requirements by categorizing them into four levels of necessity: **MUST**, **SHOULD**, **COULD**, and **WON'T**.

This helps in determining which features are essential for implementation and which can be deferred or excluded.

Power BI Analytics Workshop and Assessment MoSCoW

Thank you for participating in the Power BI Data Analysis Workshop & Assessment, where we discussed topics and challenges related to data analysis. The culmination of the workshop is this survey regarding the requirements identified during the workshop with you.

HOW DO WE VOTE? As announced by IT-Dev during the workshop, you will find four possible answers for each question:

MUST (must be implemented)

SHOULD (should be implemented, functionality should be included in the solution if possible)

COULD (could be implemented, the requirement is desirable but not necessary)

WON'T (should not be implemented, but we can revisit it in the future).

This is a single-choice survey - there are no incorrect answers - it is up to you to decide which solutions available in Microsoft 365 will help you in your daily work

Based on the responses provided, IT-Dev will prepare a report with recommendations for the development of the Digital Workplace. Completing the survey will take you no more than 5 minutes.

Ready for change? Let's go!

IT-DEV

* Required

1

Establishing a central data source to store data necessary for generating multiple reports

*

MUST

SHOULD
