

Microsoft Data Security Workshop

See Your Data Risks Clearly. Act Faster. Secure with iT1.

Workshop Highlights

- Understand risks of dark and unclassified data
- Identify insider-driven data exposure risks
- Assess your environment against key data protection standards
- Analyze findings with a detailed risk report
- Explore tools to mitigate data risks
- Develop clear next steps and recommendation

Is Your Data as Secure as You Think?

Many organizations lack visibility into where sensitive data lives or how it's being used—especially with the rapid adoption of generative AI.

With data volumes growing fast, the risk surface expands just as quickly. Without the right insight, gaps remain hidden until it's too late.

80%+

of leaders cited leakage of sensitive data as their main concern around adopting Generative AI.

Improve Your Data Security Posture

The Data Security Envisioning Workshop helps you uncover data risks, strengthen governance, and build a clear, actionable plan aligned to Microsoft best practices.

Why You Should Attend

Given the scale and complexity of modern data environments, organizations need a better way to identify, prioritize, and act on data security risks - before they become incidents.

What You'll Gain:

Identify Data Risks

Uncover sensitive data exposure across Microsoft 365 and beyond.

Document Strategy

Align stakeholders around data security, privacy, and compliance priorities.

Accelerate Compliance

Leverage Microsoft Purview and built-in tools to move faster.

Actionable Next Steps

Get clear recommendations tailored to your environment.

How the Workshop Works

Data Security Check (Core Component)

The Data Security Check uses Microsoft Purview to:

- Discover and analyze sensitive data across M365
- Detect risky user behaviors and insider threats
- Identify vulnerabilities across email, collaboration, and storage systems
- Surface risks tied to AI usage, IP loss, or policy violations

Optional extensions expand coverage to on-prem data, endpoints, communication compliance, and AI data security.

What to Expect During the Workshop

- Data Security Check report with key findings + insights
- Prioritized recommendations to reduce risk
- Visibility into Microsoft's data security approach
- Optional compliance assessment with improvement actions
- Long-term roadmap for data protection and governance

Who Should Attend the Workshop

- CIO / CISO / Security Leaders
- Compliance & Risk Leaders
- IT & Security Architects
- Data Governance Stakeholders

Why iT1?

From Data Exposure to Data Confidence

iT1's Microsoft-aligned specialists deliver a data-driven assessment that uncovers hidden risks across your environment. Backed by deep Purview expertise, we help you protect sensitive data while maximizing your existing Microsoft investments.

Secure your data before risk becomes reality.
