# Simplify and Accelerate Your Desktop Virtualization Journey

Deploy secure virtual desktops and apps quickly and easily for a better remote experience for your teams

High  
Performance

Enhanced  
Security

Modernize  
User Experience

Standardize  
Globally

## BUSINESS DEMAND

With remote work being more common than ever, IT departments are constantly looking for ways to manage devices, improve system performance, and increase security, while managing the day to day user experience.

## OUR SOLUTION

With iT1's **Azure Virtual Desktop QuickStart Implementation**, we help organizations modernize and accelerate this experience. IT workers experience simplified and scalable management from on-prem virtualization to Azure Virtual Desktop while users can connect from any device and don't have to worry about reduced performance.

Contact our Microsoft Solution Architect Team to learn more at: [csp@it1.com](mailto:csp@it1.com) or [877.777.5995](tel:877.777.5995).

**Microsoft Azure Virtual Desktop** is a desktop and app virtualization service that runs on the cloud.

Reduce operational expenses by eliminating the need to manage outdated software or on-premise infrastructure.

Remote workers can securely access company resources using their own device.

Our QuickStart Implementation allows us to take the heavy lifting away from strained IT resources. From the initial planning phase to configuration, we can rapidly deploy and scale your desktops and apps to enable secure remote work.

We'll provide you with a best practices image management solution and a clear understanding of the capabilities of your virtual desktop image.
