Microsoft Security Assessment

Cybersecurity just got a lot simpler with iT1

Let iT1 help improve your organization's security posture by gaining insight into the security configurations and processes that protect your data and users.
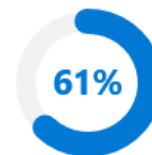

For many businesses, remote work requires moving to the cloud or adapting a hybrid model that gives employees the flexibility to work where they want. To effectively operate with a remote and dispersed workforce, a security solution is vital to protect your company's data and your users. Relying on disjointed security solutions or limited IT resources is not a scalable strategy and can significantly impact you financially if you experience a data breach.

Our team will evaluate your 365 environment against over 100 security controls, focusing on Exchange Online and Azure AD identities (users and guests) and Office 365 groups.

Objectives
- ☑ Improve your ability to Protect, Detect and Respond to security threats impacting Office 365
- ☑ Understand the steps required to enhance your security posture.
- ☑ Learn the key security considerations involved with deploying Office 365

Cyberthreats are constantly evolving and becoming more sophisticated. Security breaches can disrupt operations, leading to downtime and a substantial impact financially

61% of small businesses that experienced a recent cyberattack were not able to operate.

60% Many organizations lack skills inhouse to deal with cyberattacks

90% Businesses would consider using a managed service provider if they offered the right cybersecurity solution

$108K average cost of a SMB data breach.
