

Purview Readiness & Environment Setup

Assess the data governance maturity and establish a secure Microsoft Purview environment. Ensure technical and organizational readiness, delivering a strong foundation for data governance success.

Implementing Microsoft Purview begins with understanding the organization's governance maturity and technical landscape. This engagement will cover stakeholder interviews and a data estate assessment to identify priorities and risks.

Analysis of the data landscape across cloud and on-premises, assess current practices, and align governance goals. A gap analysis and roadmap are created based on the desired outcomes—whether for compliance, security, or analytics enablement.

The result is a detailed governance roadmap and knowledge transfer to ensure your organization is ready to move forward.

During this engagement, ITC will provide a Data governance maturity assessment report, perform stakeholder interviews & gap analysis, and deliver a high-level roadmap for a Purview implementation in your environment..
