You can get assistance from our Microsoft Azure center of excellence in creating the finest migration plans and strategies for a safe, dependable, and scalable transition to the cloud.

Azure Cloud Assessment

Analyze environment and application dependencies in great detail.

- Offer a strategy, a technique, a price, and a deadline.
- Set security, compliance, and commercial objectives.
- Review and inventory the environment
- Organize key players around the business case and requirements.

Azure Cloud Migration Planning

- Plan the migration to cause the fewest possible disruptions.
- Create an Azure target architecture that complies with the necessary security, compliance, performance, and cost standards.
- Plan and schedule a priority migration.

Azure Cloud Migration & Management

- Conduct thorough testing to carry out the migration plan and offer the current status throughout each migration, phase to ensure a smooth go-live event.
- Application testing and validation
- Optimization & automation
- Go-live implementation
- Azure environment setup
- Support after cloud migration

DESCRIPTION

Tradegenic's Azure implementation

The migration of popular workloads like .Net apps, SQL Server databases and DevTest environments, SharePoint collaboration, Office and Exchange productivity, and Big Data analytics are all included in our Azure setup services. Our Azure implementation services enable you to install data-driven, intelligent applications like image recognition and bot services as well as artificial intelligence services that support deep learning and real-time analytics, as well as upgrade your existing systems.

You gain additional advantages from using our Azure consulting services, such as:

- Efficient handling of resources
- Devoted attention to business-centric projects as opposed to maintenance
- Flexibility and scalability
- Significantly lower total cost of ownership
