

Azure Migrate Assessment

Take the next steps towards the cloud

The cloud offers a range of opportunities that can create value for your company. Increased effectiveness, mobility and security are just some of them. But how do you move your company to the cloud in the best manner? What should be the next steps? And what is the price? You will get the answers to that through an Azure Migrate Assessment.

Make decisions based on knowledge. Not on gut feeling.

With an Azure Migrate Assessment, you get an analysis of how far your company is on the journey to the cloud right now - and what it takes to continue that journey. We review your company's current IT environment. We talk to the IT Manager. And we measure when your servers and applications are working hard and whether there are periods when they are not in use. We add all the numbers together with our insights and give you the result in a report. In the report you get recommendations for your further cloud-journey. All in all, a well-informed foundation that makes it easier for you to make the right decision for your business.

Skip the intermediate result. Start with the conclusion.

An Azure Migrate Assessment is a decision document. It is based on thorough analyses and considers the practical details. But you will not get a report full of too many technical details about bits and bytes, you have to take into consideration if you want to move towards the cloud. Instead, you will get a report that jumps directly to the conclusion and recommendations. A report that makes it easy to understand the benefits, challenges, costs and the value each path creates for your company.

When the path has been chosen, we will dive further into the many details on which our conclusions and recommendations are based. But first, it's all about setting a direction.

This is what you will get with an Azure Migrate Assessment:

- A review of your company's current exploitation of cloud computing
- A summary of potential gains by moving
- A recommendation to the next steps on the journey and an estimate on the price

A simple 1:1 migration or a question of transformation?

There are multiple paths to choose, if you want to move your company towards the cloud: a 1:1 migration of your current IT-setup, as you know it, or different opportunities for transforming into new modern, scalable as-a-Service-solutions.

In an Azure Migrate Assessment we cover benefits and challenges related to the different opportunities. And we provide a cost estimate in order to let you know the costs here and now, and also in the longer perspective.

An easy-to-read report

The result of the Azure Migrate Assessment will be covered in a report along with a recommendation for you and your company's journey towards the cloud. The report is based on your company's current situation, and it presents different paths to choose while emphasizing the benefits, challenges and price about each of them. The report is crafted as a decision document that shortly and precisely covers everything you need to know to be able to make a well-informed decision.

What is the price of an Azure Migrate Assessment?

The cost is 14.975 DKK + VAT.

The price includes a full-day visit from one of our Cloud-experts that in collaboration with the IT-responsible review your current IT-setup. After the visit we monitor and measure your servers and applications. And when we have enough data, we analyze and make a conclusion in a short and precise report. If you are interested in the numbers, insights or other data that have been collected you can also receive that along with the report.

If you at a later point choose IT Relation to execute a migration to Azure, we are giving you a discount on 14.974 DKK on this task (corresponding to the price of the analysis).

A tool for IT-responsible and managers

The result of the Azure Migrate Assessment will be covered in a report along with a recommendation for you and your company's journey towards the cloud. The report is based on your company's current situation, and it presents different paths to choose while emphasizing the benefits, challenges and price about each of them. The report is crafted as a decision document that shortly and precisely covers everything you need to know to be able to make a well-informed decision.
