

## Azure Onboarding– 3 weeks Workshop

### Summary:

Workshop for the transition of local infrastructures to Microsoft Azure as a basis for decision makers.

### Description:

You are currently still running an on-premises infrastructure or are already using individual services from the cloud. But now you want to know exactly - what costs will my business incur if you migrate all services to the cloud, and what could the setup look like in this respect? Very good - that's exactly where we can support you.

With our Azure Onboarding Workshop, you get exactly the information your management needs to make an informed decision. Based on the current operation of your infrastructure, we work out the appropriate setup in Microsoft Azure and include potential optimizations for sizing, rights management, security, and ongoing IT operations. As a result, you will receive a detailed offer for a possible Azure setup as well as our recommendations for migration.

We are happy to carry out the migration, including accompanying project management, afterwards. The detailed offer enables you to obtain additional offers and thus make an even more transparent decision.

### Result at a glance:

- First appointment, preferably in person: signing and exchange of the NDA (non-disclosure agreement), discussion of data protection-relevant topics for the creation of the Cost Estimation (temporary access authorizations)
- Recording of your existing infrastructure and services (remote tools+ on site, Vienna area)
- Development of the appropriate setup in Microsoft Azure (selection of machine series, sizing, security)
- Elaboration of recommendations for the future running operation, cost optimization, security
