

Azure Data Modernization Workshop

Adapt

Overcome the challenges of legacy data architecture

Accelerate

Reduce time to insights through data transformation and democratization

Win

Turn data into competitive advantage and innovate experiences

Are you still struggling with the challenges of legacy and disconnected data architectures? Legacy data warehouses and related systems won't provide the benefits you expect such as: on-demand scalability, cost efficiency, reliability and availability, advanced analytics & AI, and security.

In this 4 hour workshop designed for data professionals, our data and BI experts will guide your team through a tailored, interactive exploration to put you on the path to data management success. Your team will gain a better understanding of:

- The value of migrating apps and databases to Azure
- How to plan a data migration strategy that fits your organization
- How to choose the best tools and methods available from Microsoft and other providers

Tear down data silos to unlock new insights and accelerate time to value with Microsoft Azure.

Your Aspirations + Our Expertise. Let's Get To Work.

Workshop Topics

- The benefits of cloud data solutions
- Data migration planning
- Choosing the right data architecture
- Matching technology to business use cases
- Data transformations & pipelines
- Integrating app data using Power Platform
- Data governance & security
- Working with the Azure data, Power BI and Power Platform solutions for specific use cases

Deliverables

- Pre-workshop preparation to focus topics, choose use cases and gather data sets.
- Tailored exploration with Azure Data solutions and sample data sets.
- Post-workshop executive brief with actionable next steps for a clear direction forward.
