WHAT THIS ASSESSMENT CATCHES

Five failure modes

nobody warned you about

01 Cutover weekend overruns

Standard upgrade tools can't process 800 GB databases inside a weekend window.

02 Cloud Migration Tool blockers

Forgotten customizations or table extensions that quietly fail automated migration.

03 ISV add-on rewrites

Continia, ExFlow, Swebase — each needs an upgrade path or AppSource alternative.

04 Localization decisions you didn't realize you were making

Baltic and Nordic statutory reporting, bank formats, e-invoicing, payroll.

05 Integration cliff edges

EDI, e-commerce, bank, CRM — some auto-migrate, others need full redesign.

WHAT YOU RECEIVE AFTER TWO WEEKS

Five concrete deliverables

written, costed, and named

01 Assessment report

20–30 pages — version-bridge path, customizations, ISV add-ons, localization, data, integrations, hardware.

02 Cost estimate by workstream

Development, data migration, localization, integrations, testing, cutover, hypercare — each line-itemed.

03 Project timeline

Milestone-level phasing with critical path identified — calibrated to your specific complexity.

04 Risk register

Named risks specific to your codebase, with mitigation actions and contingency budget.

05 AppSource fit-gap map

Which extensions cover which functional areas, including JEMEL's own where they apply.

HOW THE 2-WEEK ASSESSMENT WORKS

Two weeks, one engagement

WEEK 1

Discovery and analysis

- Discovery sessions with your team (on-site or remote)
- Technical analysis of NAV codebase and modifications
- Database profiling and ISV add-on inventory
- Integration current-state mapping
- Localization gap analysis

WEEK 2

Synthesis and delivery

- Cost modeling and workstream breakdown
- Risk identification and mitigation planning
- Document production: report, register, fit-gap map
- Presentation walkthrough with stakeholders
- Final deliverables handover

Fixed-fee paid engagement

Fee credited toward implementation if you proceed · Microsoft AIM Program eligible
