Celiveo 365

The intelligent cloud and intelligent edge are the future of computing. Celiveo 365 extension for Universal Print by Microsoft makes it a reality applied to printers*, MFP*s and documents security, user mobility to improve remote work capabilities.

Celiveo 365 Intelligent Edge is running inside most MFPs and printers, with High Security and High Availability. It extends Universal Print within Azure to provides card and PIN Code access control to printers and MFPs, Pull Print jobs retention, print rules, tracking and bill-back reporting.

"With Universal Print, Microsoft has built the Cloud print infrastructure all our clients have been dreaming of, abstracting printer drivers complexity, easy usage by end-users, federated user authentication, central and secure management portal in a public Cloud.

Therefore, we have built Celiveo 365, our new generation of Secure Print and Documents Management solution, fully on Universal Print API, inside Azure. It is not a side solution with hooks but a natural extension adding card/PIN authentication on printers, secure printing, pull printing and cost reduction tools to Universal Print by Microsoft."

Jean-Francois d'Estalenx, President, Celiveo

- No VM, VPN or server/gateway needed
- Enhances Universal Print by Microsoft
- Adds user authentication on printers and MFP using:
  - Smartphones (NFC)
  - Contactless Cards
  - PIN codes
- Adds secure pull printing
- Adds rules-based printing
- Features high availability
- Tracks print/copy/scan/fax
- Native Azure SAAS App
- Zero-Trust architecture

User authentication on printers and MFPs

Control who can use printers and MFPs with granular access rights based on AAD groups and OU, printer tags and model. Rely on the many authentication methods supported by Celiveo 365, all with user self-management to reduce IT cost.

Secure Pull Printing

Users can print through Private and Public Cloud and their documents are safely stored in Azure, pending release. Upon authentication on a printer or MFP, users can release the print jobs of their choice, with intelligent print rules applied as needed.

Control the usage and cost of your printer fleet

Control and report "who does what" on printers (print/copy/scan/fax), at what cost, applied intelligent rules, cost saving, green IT reports, list of jobs that were unclaimed and deleted.
