

# Elevate24

## Privileged Access Management solution that decreases IT workload while supporting compliance

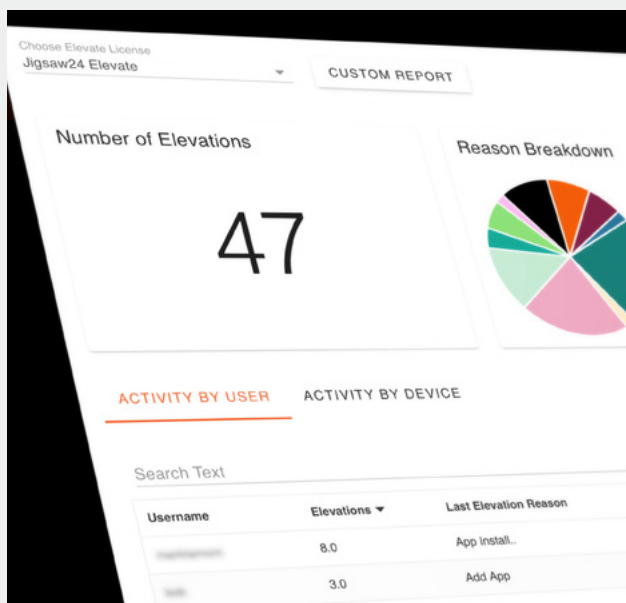

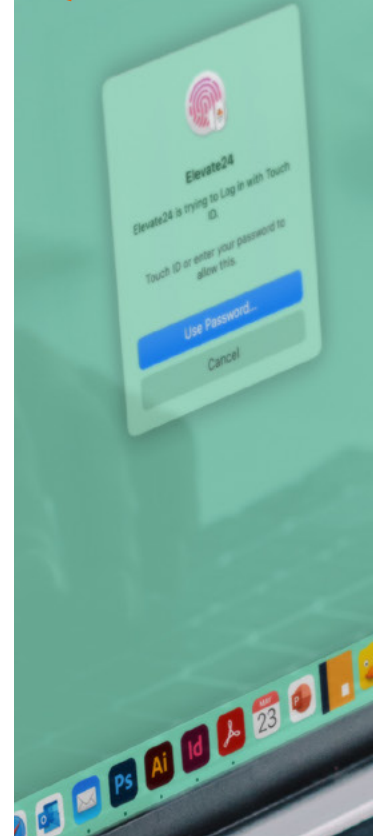

Created by MacAdmins for MacAdmins, our innovative fully managed Privileged Access Management solution provides IT teams with visibility over their entire estate and monitoring capabilities to prevent potential vulnerabilities and ensure compliance.

### How does it work?

Elevate24 gives your team the power to grant limited privileges to certain users for a limited period of time through a simple self-service request. This means you can reduce your workload by allowing users to install apps, updates and more by themselves without the need to log a support ticket, while still maintaining security restrictions and avoiding the pitfalls of a completely open privileges system. You can group users and restrict what privileges they're granted according to their needs, and protect from both malicious attacks and accidental exposure to cyber threats.

### The benefits

- Can be integrated with your own monitoring tool.
- Offer constant access to users with roles that require it, such as developers.
- Get insight on the user session and receive detailed reports.
- Provide access to the latest software releases.
- Secure SaaS reporting infrastructure ensures data security.
- Works within the bounds of current precedence – meaning user privileges can't overrule restrictions set by your MDM solution.
- Can be used offline.
- Boost security with additional features like two-factor authentication, demote user on load, end sudo terminal sessions and more.
- User interface branding can be customised for Premium customers.
- Provide a seamless experience that empowers the end user.

## Book your demo today

### Witness first-hand what Elevate24 can do for your team

To learn more about the capabilities of Elevate24 and how it can help reduce your IT workloads while ensuring compliance and boosting security across your business, get in touch with our expert team on the details below to book your demo session.
