Intune
Secure Build

Control and convenience for seamless device management, based on security best practice

Personalised

Our Intune Secure Build service allows you to take advantage of a customised Windows build so you can deploy devices and apps automatically, with zero touch capabilities and pre-defined security postures to ensure a best practice installation with a quick-to-deploy, easy-to-support packaged solution.

In addition to the automated base solution, we can customise the deployment to support different scenarios such as co-managed, hybrid deployment, scripts and complex application packaging to name a few, so no matter your requirements, we have you covered.

Secure

We'll ensure your build aligns to one or more configurations of your choosing. We offer alignment to either the Windows Intune Baseline, NCSC (National Cyber Security Centre) or CIS (Center for Internet Security) benchmarks to enhance Windows device management according to your requirements. We have evaluated nearly 500 security policies across the three benchmarks to offer pre-defined templates that saves hours spent designing, reviewing and test deploying, and through the power of automation we enforce the settings within your Intune deployment. This means the solution is tailored to your needs and much quicker to build than what it'd otherwise take to achieve that level of customisation.

Our UK-based Software Development and Professional Service Teams will assist you in implementing a security-first, best practice deployment of Microsoft Intune, creating a robust foundation for managing Windows devices.

Standardised

Intune facilitates seamless device enrolment, supporting various methods such as Autopilot and Bring Your Own Device (BYOD). This, coupled with one of our three security benchmarks controls, ensures secure and standardised configurations are enforced during the enrolment process. Our service further leverages policy management where we enforce security policies for Windows devices, covering settings like password requirements, encryption, and local firewall configurations.
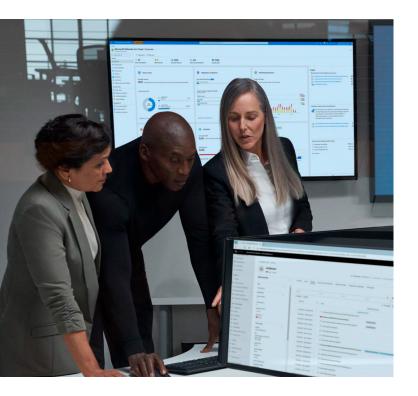

In addition, our solution provides application management, allowing us to distribute and manage applications centrally, ensuring that only authorised and up-to-date software is installed and by layering on CIS controls to application permissions and configurations, we help reduce vulnerabilities. This covers both applications from both the Microsoft Store and external sources, allowing for a seamless experience when it comes to application deployment.

Compliant

When it comes to patch management, our Intune Secure Build automates the deployment of security updates and patches to keep devices protected from known vulnerabilities, with updates in line with CIS guidelines.

As an interfacing technology solution, endpoint protection can be delivered via Microsoft Defender for Endpoint, providing real-time protection against malware and other threats. The CIS benchmarks validate antivirus configurations and ensure timely definition updates. If you don't need the Defender suite, we can incorporate other EDR solutions into Intune Secure Build.

What's included?

- Application deployment
- Identity and user integration
- Device enrolment
- Update rings
- Defender for Endpoint
- Configuration profiles
- Bitlocker
- Security and compliance policies
- Company portal

Who is this for?

If you're looking for help with your Intune deployment into Windows devices, are looking to achieve an industry benchmark such as Cyber Essentials or CIS, or have an existing deployment of Intune and have concerns around its configuration, security settings, user experience or provisioning process, our Intune Secure Build service can help you.

We recommend our Intune services if you're looking to:

- Maximise your ROI
- Enhance your user experience
- Reduce build and provisioning time
- Address a challenge or situation
- Establish a best practice approach
- Address concerns about device security
- Add more devices to your estate
- Align with security benchmarks

Why Jigsaw24?

Expertise and experience

We hold Microsoft Solutions Partner designations in both Modern Work and Infrastructure and have done since their launch in October 2022.

Customised solutions

We offer tailored solutions based on the unique needs and requirements of each customer.

We have our own dedicated Software Development team who deliver device/endpoint management solutions using industry recognised or in-house developed software.

Security and compliance

Security is of the upmost importance when it comes to device management and through our assessment, we highlight and recommend robust security measures.

We have broad knowledge of compliance requirements and understand how Intune can assist in meeting regulatory standards.

Scalability

Intune allows businesses to develop without worrying about outgrowing their device management solution. We recognise that what was once the right solution for you may no longer be viable due to growth or organisation complexities, so we ensure that as your business demands become more complex, your Intune solution can be refined to meet those requirements.

Automation and efficiency

We leverage automation features within Intune to streamline routine tasks and enhance overall IT efficiency. We can also undertake the remediation work identified within your report to ensure that any identified shortcomings or vulnerabilities are resolved in a timely manner.

Managed services capability

You can unload the burden of management and ensure compliance is continually achieved through our Windows Device Management service.

Intune can bring many benefits to your business when deployed correctly by accredited experts, from a reduced management workload to increased security.
