

## **Solution Overview**

The new age identity verification is not just automation, rather smart automation and authentication, with minimal manual interventions. Digital KYC and Video KYC have set the ball rolling for major industries to test and implement paperless processes as seamless journeys for customers and users. That is exactly where Jukshio's one-stop platform for Identity Verification and ML Model Monitoring stands out. Our ID verification combined with facial recognition helps you onboard and verify your customers with utmost convenience and ease.

Jukshio's highly automated Identity Verification solution simplifies compliance, customer onboarding, verification and authentication, and also text extraction from documents for businesses. Our solution enables you to customize workflows for your business without compromising on user experience. Harnessing the power of AI-based technology, we assess whether a user's government-issued ID is genuine or fraudulent, and then compare it against their facial biometrics. And that's how we give companies in Telecommunications and Banking industries like Jio and HDB the assurance they need to onboard customers remotely and securely.

Our Enterprise Employee Management Solutions help companies run a seamless process for their employee onboarding, attendance management and giving an adaptive and risk based authentication for hierarchical access control to sensitive data. We built a fool proof system of how businesses can authenticate the identity of their employees through an AI-powered Facial recognition system to mark attendance digitally from anywhere and through any device while making sure it is highly secure and does not compromise on user experience.

We do not limit ourselves to just ID verification.

We do understand that most models do fail in production - almost all the time. Hence Jukshio's ML Model Monitoring Service enables you to evaluate your already existing models while continuously monitoring them - just so you don't have to. You can also see a live view of all your models of identity verification and enterprise employee management solutions in production, all at a single place with real-time dashboards. Monitor model activity, actual model performance and much more with our Model Monitoring Platform.
