

# The SaaS & Device Management Platform that simplifies how IT works.

Gain 360<sup>°</sup> control over your SaaS applications and device inventory with a platform that makes it easy to visualize user access, analyze utilization trends, and automate app provisioning processes to make your IT operations run more efficiently.

**360° App & Device Control** 

**Automated Provisioning** 

Access Governance

**Cost Optimization** 

# Centralize your SaaS apps & devices with 360° asset control

Managing assets on spreadsheets is not a scalable solution and poses inaccuracy risks. Josys integrates with hundreds of popular SaaS apps & data sources to instantly connect your employee data with their provisioned licenses and issued devices. With Josys's centralized dashboard, IT can control user access levels, identify device refresh cycles, and better manage the organization's software and hardware assets.

# Automate provisioning for fast and seamless onboarding experiences

For growing companies, onboarding employees can be a manual and tedious task. Josys provides workflow automatons to expedite app provisioning during employment transitions. IT teams canproactively manage access requests by bulk provisioning multiple apps at once, scheduling employee access dates, and deprovisioning access during offboarding with a single click.

#### Strengthen governance of employee access permissions

With SaaS sprawl on the rise, oversight of your employee's data access can become less centralized and pose a security risk to your business. With Josys, IT teams are in control and accountable for all the access permissions. Josys tracks your organization's SaaS usage, surfaces shadow IT, and monitors role-based permissions to implement tighter controls and oversight.

# Track your SaaS expenditures & optimize your budget

When SaaS procurement is non-centralized and underutilized, IT costs can skyrocket unknowingly. By tracking subscriptions and utilization data with Josys, IT teams can identify unused licenses and app consolidation opportunities to right size purchasing and save on SaaS costs during contract renewal periods.

# All-in-One SaaS & Device Management Platform

Josys was created to simplify IT operations

License Management	Track your application subscriptions, licenses allocated, and SaaS expenditures for a holistic overview of your software assets.
User Profiles Dashboard	Easily import employee data using Josys's integrations with Google Workspace, Microsoft Azure, or other external data sources and assign licenses and devices.
Shadow IT Discovery	Use the Josys browser extension or Google audit logs to discover unsanctioned applications and take action by tracking, integrating, or revoking employee access.

Integrations	Josys has built hundreds of integrations with popular SaaS applications, allowing IT teams to easily connect, track usage, and provision users with a few simple clicks.
Automated Provisioning	Schedule and bulk provision an employee with multiple applications in advance of their start date to make onboarding and offboarding faster and easier than ever before.
Device Inventory	Create an accurate tracking system for your hardware asset, identify available inventory for reissuance, and monitor refresh cycles for simple budget forecasting.
Security Features	Josys prioritizes the security and integrity of your data. Enable two-factor authentication, IP whitelisting, or SAML single sign-on authentication for added security and protection.
Josys API Framework	The Josys API allows seamless integration of custom applications and systems with Josys.
