Foundational Identity Analysis

Ensure a Secure Foundation for Microsoft Cloud Services

Why Do You Need This Analysis?

Before you embark on optimizing your Microsoft Cloud Services, it's crucial to ensure that your foundational identity components and frameworks are in place and configured with best practices like Zero Trust. JourneyTEAM's Foundational Identity Analysis is a core evaluation of your environment's identity landscape.

Upon completion of the analysis, we will provide you with a report of risky findings in your M365 Identity stack. This analysis will also include recommendations on how to best manage and secure user identities in Azure AD, how to improve securing your data and resources, all while keeping costs in mind.

Foundational Identity Elements Reviewed

- Cloud Environment(s) Identity stack configuration and logs
- User and Admin Access
- Current All-Up Identity Security Landscape

Analysis Deliverables

- Current State of Identity and Access Components
- Cloud Maturity or Migration Risks/Considerations
- Enhancement Implementation Risks/Considerations

Business Value:

- Awareness and visibility into the security posture of your Microsoft cloud based identities
- Recommendations to minimized Identity risks implementing Microsoft Products (ERP, CRM, BI, Exchange, Teams, SP, Etc.)
- Recommendations on configurations and process improvement (if needed) to maximize Identity Security and minimize end user impact including Zero Trust maturity
