

Microsoft Power Apps by Softline

Do you need to create applications using Microsoft platform so you can quickly consult and record information even from your mobile phone?

We propose standard and customer developed Applications. We have ready-to-use applications for booking decks, HR flows, simple requests.

Using Power Apps Services, Softline will support you in creating customized applications for your company's needs using a set of services, connectors and a data platform that provide an agile application development environment.

Softline through Power Apps can quickly create custom business applications that connect to business data stored on the underlying data platform (Common Data Service) or on various local and online data sources (SharePoint, Microsoft 365, Dynamics 365, SQL Server, etc.). App managed service: manage and develop customer applications

We create applications for end users with the aim of consuming and processing information from a browser or on mobile devices (phone or tablet), streamlining collaborative work and digitization of companies.
