

Jump Analytics Mining Solution Overview

Jump Analytics allows top performing Mining companies to capture, report and analyze Key Mine Performance Indicators (“KPI’s) by deploying Jump’s Mining Analytics Solution.

Jump’s solution was designed and developed in partnership with some of Canada’s leading Mining companies. These include; Newmont Goldcorp, New Gold, Kinross, Quebec Iron Ore and Torex to name just a few.

We’ve enabled these companies to improve their Mine site and Corporate reporting by leveraging Jump’s Mining Solution to provide rich, detailed reports and dashboards. We accomplish this by eliminating the expensive manual data reconciliation processes, that involve key Mine systems, in an efficient and cost-effective way.

A key reason for Jump’s Mine Solution being a success; it’s built using Microsoft’s PowerBI platform, which is the leading Business intelligence solution on the market. It provides a cost effective, open and flexible architecture, making Analytics available to everyone who needs insight into the performance of a Mine Operation.

Below is a screenshot capturing key mine metrics, that are collected from the Mine systems.
