

ERP Analytics

Get more value from your ERP System

Our ERP Analytics solution helps companies like yours maximize the value of the data you own. Our Business Intelligence framework, pre-built data models and experience allow you to realize that value in a shorter amount of time.

What is ERP Analytics?

You rely on your **Enterprise Resource Planning (ERP) system** to manage your supply chain, optimize your operations and make various processes more efficient. But more than that, it holds a treasure trove of data that ERP Analytics can transform into insights to help you make more informed, data-driven decisions for your business.

Just Analytics specializes in helping you get hold of the information you need, when you need it, and in a format that is easy to consume and analyze. We help you maximize your investment in top tier ERPs such as SAP, Oracle and Microsoft Dynamics, by transforming your ERP data into actionable information, that you can access from any device.

For ERP Analytics, we employ the following in our approach:

Elastic

We use a fully-managed Platform as a Service (PaaS) environment that allows you to pay for resources as-you-go and to scale resources easily.

Right Architecture

Massively Parallel Processing (MPP) + In-Memory Cache allows reduction of daily batch processing times from hours to minutes.

User Friendly

Multiple Analysis Services models by Subject Areas such as Secondary Sales, Receivables allows your users to focus and discover insights in their area of expertise

Why customers use ERP Analytics

- First, we can consume all data (structured / unstructured, ERP / Non – ERP, On-premise / On-cloud) allowing the users to get a full 360 view of their core performance data in one place.
- Second, we can scale based on your data and processing needs. You can start small and expand to petabytes of data without changing a single line of code.
- Finally, we support all types of analysis: whether historical, forward-looking, dashboards or Ad hoc using the same set of tools.

"Previously our management reporting was done manually, and a lot of time was spent to answer simple questions about our performance. With the ERP analytics solution we have opened up the valuable data in Oracle eBusiness Suite for self-service analytics by everyone in the finance team and the directors. Everyone now has access to detailed performance data by product, customer, supplier and other dimensions which has allowed us to make better decisions."

- Janet Ang, Financial Controller, JMS Pte Ltd Singapore
